Vermont Vital Statistics Annual Report

2007

State of Vermont
James H. Douglas, Governor

Agency of Human Services
Robert Hofmann, Secretary

Department of Health
Wendy S. Davis, MD, Commissioner

May 2010

Printed on recycled paper.

We gratefully acknowledge the contributions of the medical records staff, physicians and midwives, funeral directors, lawyers, and court clerks for their help in collecting and providing us with this data.

We also recognize the 251 town and city clerks, who are our local registrars. Without them, these analyses of Vermont's vital statistics would not be possible.

Introduction

**Figure 1
VERMONT COUNTY MAP**

THE VERMONT VITAL STATISTICS SYSTEM

Statewide vital registration began in Vermont in 1857, when the General Assembly passed a bill requiring that towns report all births, marriages, and deaths occurring in their jurisdiction to the Secretary of State. The legislature also required periodic publication of tables from the reports. This volume is the latest in a series of publications begun in 1857. Historically, the information contained on vital records has served as an important tool for public health officials and others by providing a picture of the general health of the population. Recognizing its importance, in 1896 the Legislature transferred responsibility for the vital statistics system to the newly formed Board of Health, the forerunner of the Vermont Department of Health. The Health Department has retained this responsibility to the present day.

The Vermont vital statistics system monitors the following vital events: births, deaths, marriages and civil unions, divorces and dissolutions, fetal deaths, and abortions. Each type of vital record follows a different path before being used to produce the statistics published here.

Births: When a birth occurs, the physician, midwife, or other birth attendant is required to complete a birth certificate and file it with the town clerk in the town of birth within 10 days. For hospital births, it is usually the medical records staff that completes the birth certificate. The completed birth certificate is recorded and filed in the town where the birth took place, and a certified copy is sent to the Health Department.

Deaths: Although a physician is responsible for filing the death certificate, the job may be, and often is, delegated to the funeral director. Most of the information needed to complete the death certificate is obtained from the family of the deceased. A physician, however, must complete the cause of death information and sign the death certificate. The funeral director files the completed certificate with the town clerk who sends a certified copy to the Health Department.

Marriages and civil unions: When a couple wishes to marry or establish a civil union in Vermont, they provide a town clerk with the information needed to complete the license. The couple takes the license to an officiant, who signs and dates it, and returns it to the town clerk. The town clerk records and files the certificate, and sends a certified copy to the Health Department.

Divorces and dissolutions: A divorce certificate or certificate dissolving a civil union is initiated by a lawyer or other individual handling the divorce or dissolution. The certificate is filed with the court as part of the divorce or dissolution proceedings. The court keeps the certificate until the decree becomes final, usually three months after the court hearing. When the decree is final, the court clerk signs the certificate and sends it to the Health Department for filing.

Fetal deaths and abortions: Reports of fetal death and induced termination of pregnancy (abortion) are sent directly to the Health Department by the physician, hospital, or clinic that performs the procedure. By law, these reports are for statistical purposes only, are not public records, and are destroyed after five years.

In addition to receiving copies of vital records from Vermont town clerks, the Health Department also receives copies of certificates of all Vermont resident births and deaths that occur in other states and in Canada. This allows the Department to do statistical analyses of vital events involving Vermont residents even if the birth or death occurred outside of the state. Health Department staff code and enter all vital records received into a computerized database. Records with unknown or unlikely data are corrected after querying the data provider. A data file containing statistical information from the records is sent to the National Center for Health Statistics to become part of a national database.

EXPLANATORY NOTES

1. The tables in this bulletin were derived from records of vital events filed at the Vermont Department of Health for calendar year 2007.
2. Rates are based on the 2007 population estimates produced by the Vermont Department of Health.
3. Caution must be used in comparing rates due to the small population in Vermont and the small number of events recorded.
4. Rate comparisons throughout are made to the U.S. white (Hispanic and non-Hispanic) population rather than entire U.S. population. This is because only 3.2 percent of the Vermont population was non-white as of the 2000 U.S. Census.
5. If you have questions about the information found in this bulletin, you may contact a statistician at the Vermont Department of Health, 802-863-7300.
6. If you have questions about the population figures found in this bulletin, you may call the Vermont Department of Health to request a copy of The Population and Housing Estimates, which also provides information about age groups other than those presented in this publication.
7. The following is a list of Vermont's counties and the county abbreviations that are used in this bulletin.

Addison	ADD	Lamoille	LAM
Bennington	BEN	Orange	ORG
Caledonia	CAL	Orleans	ORL
Chittenden	CHI	Rutland	RUT
Essex	ESS	Washington	WAS
Franklin	FRA	Windham	WDM
Grand Isle	GI	Windsor	WDR

DEFINITIONS, RATES, AND RATIOS

ABORTION: The purposeful interruption of an intrauterine pregnancy with the intention other than to produce a live-born infant or other than to remove a dead fetus, and which does not result in a live birth.

ABORTION RATE: Number of resident abortions occurring in Vermont x 1000, divided by the total resident women ages 15 to 44.

ABORTION RATIO: Number of resident abortions occurring in Vermont x 1000, divided by the total resident live births.

AGE ADJUSTMENT: Age adjusting allows one to compare rates among populations having different age distributions by adjusting the crude rates in each population to a standard population base. In this bulletin, county rates are adjusted using the state population distribution as the standard.

The computation formula is: The sum of (age-specific rate for each age group x standard population in that age group) multiplied by 1000, and then divided by the total standard population.

AGE-SPECIFIC DEATH RATE: Number of resident deaths in a specific age group x 1000, divided by the total resident population in a specific age group (using population estimates as of July 1).

AGE-SPECIFIC FERTILITY RATE: Number of resident live births to mothers in a specific age group x 1000, divided by the total resident female population in a specific age group (using population estimates as of July 1).

AGE-SPECIFIC PREGNANCY RATE: Number of resident pregnancies to women in a specific age group x 1000, divided by the total resident female population in a specific age group (using population estimates as of July 1).

ANNULMENT: The invalidation or voiding of a marriage, or civil union, which confers on the parties the status of never having been married to each other.

CIVIL UNION: A civil union is a legal relationship that provides for same-sex couples in Vermont all the benefits, protections, and responsibilities under law as are granted to spouses in a marriage.

CIVIL UNION RATE: Total number of civil unions x 1000, divided by the total resident population (using population estimates as of July 1).

CRUDE BIRTH RATE: Number of resident live births x 1000, divided by the total resident population (using population estimates as of July 1).

CRUDE DEATH RATE: Number of resident deaths x 1000, divided by the total resident population (using population estimates as of July 1).

CUMULATIVE ROW PERCENT: The total number of cases in the current column plus each previous column in each row, expressed as a percentage of all cases in that row.

DEATH: The permanent disappearance of any evidence of life at any time after live birth.

DIVORCE: The final legal dissolution of a marriage.

DIVORCE RATE: The sum of the number of divorces and annulments x 1000; divided by the total resident population, (using population estimates as of July 1).

DISSOLUTION: The final legal dissolution of a civil union.

FERTILITY RATE: Number of resident live births to women ages 15 to 44 x 1000, divided by the total resident female population ages 15 to 44 (using population estimates as of July 1).

FETAL DEATH: A reportable fetal death is a death prior to the complete expulsion or extraction from the mother of a product of conception, which has passed through at least the 20th week of gestation or weighs more than 400 grams; the death is indicated by the fact that, after such expulsion or extraction, the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.

FETAL DEATH RATE: Number of resident fetal deaths x 1000, divided by the total resident live births and resident fetal deaths.

FETAL DEATH RATIO: Number of resident fetal deaths divided by total resident live births.

INFANT DEATH: Death occurring in the first year of life.

INFANT DEATH RATE: Number of resident infant deaths x 1000, divided by the total resident live births.

LIVE BIRTH: The complete expulsion or extraction from the mother of a product of conception, irrespective of the duration of pregnancy, which, after such expulsion or extraction, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of the voluntary muscles whether or not the umbilical cord has been cut or the placenta is attached. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.

LOW BIRTH WEIGHT: A baby weighing less than 2,500 grams (5 pounds, 8 ounces) at birth.

LOW BIRTH WEIGHT PERCENT: The number of live births weighing less than 2,500 grams divided by the total number of live births.

MARRIAGE: The legal union of persons of opposite sex.

MARRIAGE RATE: Number of marriages x 1000, divided by the total resident population (using population estimates as of July 1).

NATURAL INCREASE: Occurs when the number of births is greater than the number of deaths.

NEONATAL DEATH: Death of a live-born infant before the infant becomes 28 days old (up to and including 27 days, 23 hours, 59 minutes from the moment of birth).

NEONATAL DEATH RATE: Number of resident neonatal deaths x 1000, divided by the total resident live births.

OCCURRENCE: The place where the event actually occurred.

PERINATAL DEATH: A fetal death or a death occurring before the infant becomes seven days old (up to and including six days, 23 hours, 59 minutes from the moment of birth).

PERINATAL DEATH RATE: Number of resident perinatal deaths x 1000, divided by the total resident live births and resident fetal deaths.

PLURALITY: The number of siblings born as a result of this pregnancy.

PREGNANCY RATE: Number of resident pregnancies in women ages 15 to 44 x 1000, divided by the total resident female population ages 15 to 44.

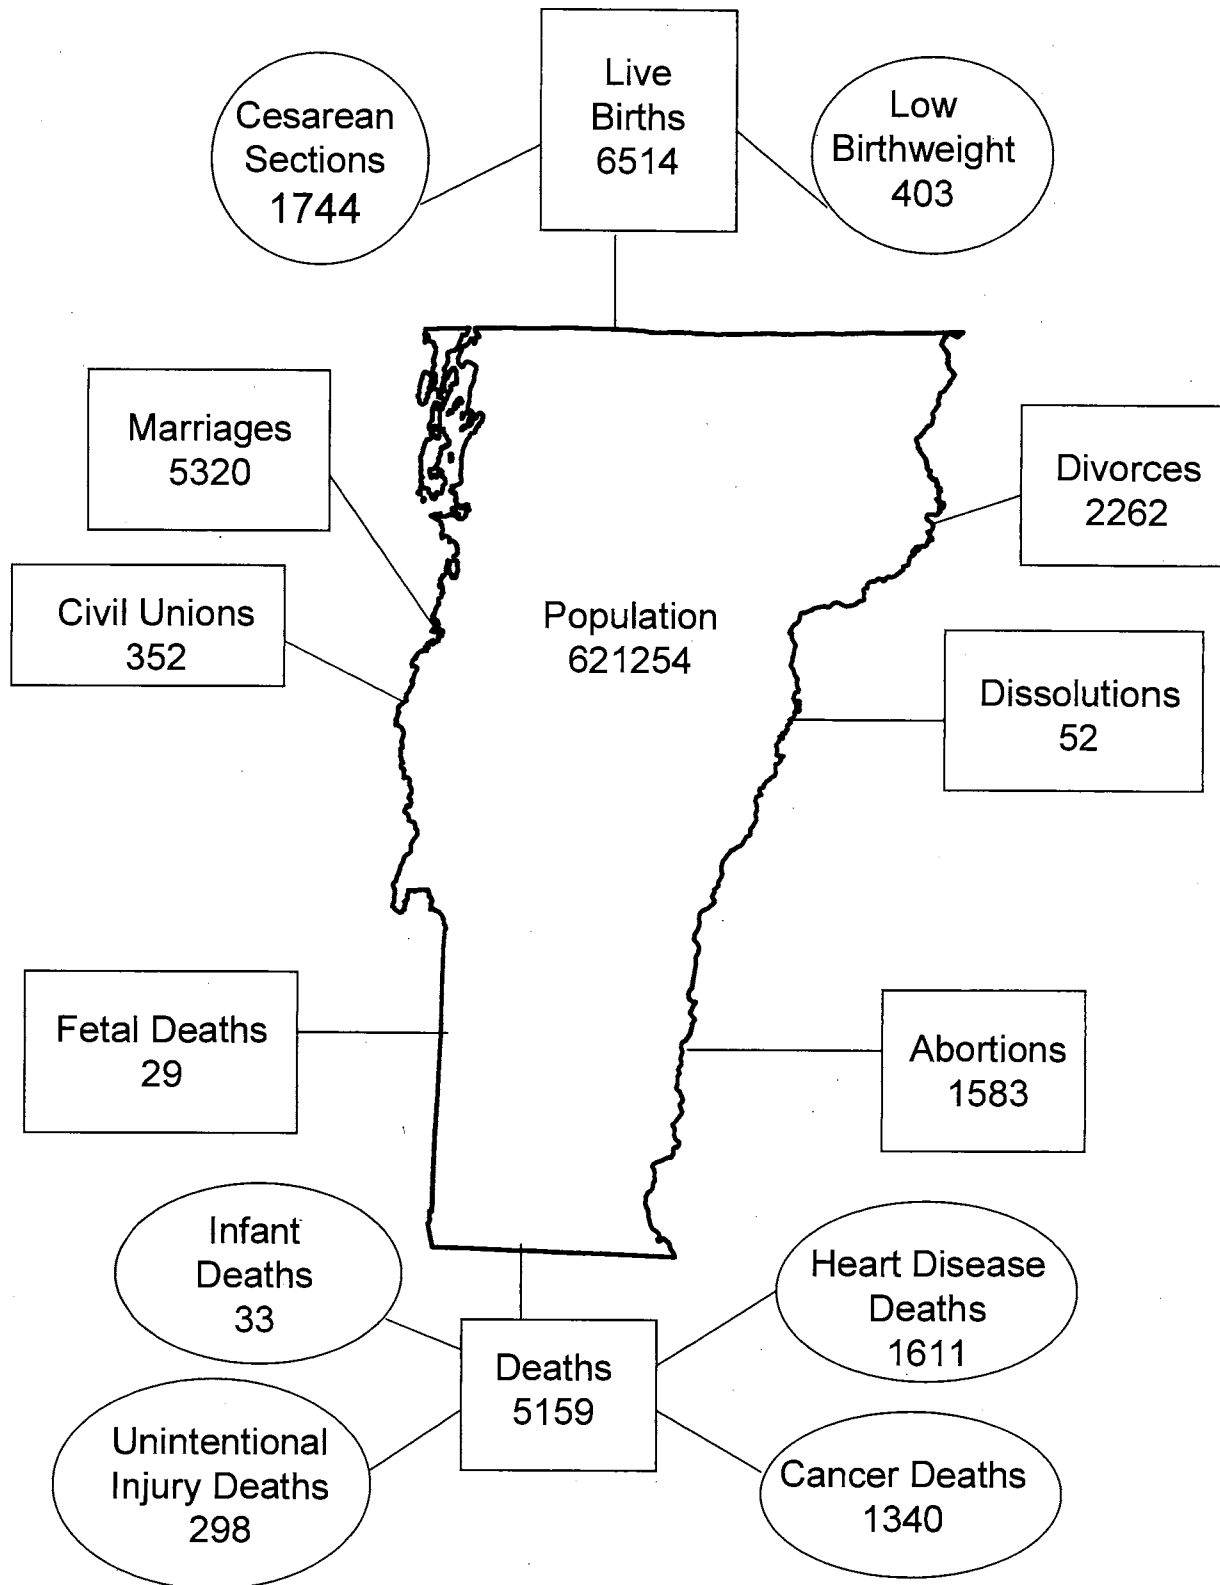

RESIDENCE: The usual place of residence for the person to whom the event occurred. For births and fetal deaths, residence is defined as the mother's usual place of residence.

ROW PERCENT: The number of cases in each row expressed as a percentage of all cases in that row.

WEEKS OF GESTATION: The number of weeks elapsed between the first day of the last menstrual period and the date of delivery.

Summary and Population

**Figure 2.
Vermont Vital Events for 2007**

Marriages, divorces, civil unions, dissolutions and abortions displayed above are occurrence data. All other events are resident data.

SUMMARY STATISTICS

Occurrence statistics include all events recorded in Vermont, including those involving visitors living outside Vermont. **Resident** statistics are limited to the events involving people with legal residence in Vermont, including events occurring outside Vermont. In 2007, reports of births and deaths to Vermonters were received from 24 states.

SUMMARY OF 2007 VITAL EVENTS

	<u>Occurrence Number</u>	<u>Resident Number</u>	<u>Resident Rate</u>
Births	6210	6,514	10.5/1,000 population
Deaths	5,168	5,159	8.3 /1,000 population
Natural Increase	N/A	1,355	2.2 /1,000 population
Infant Deaths	35	33	5.1 /1,000 live births
Fetal Deaths	33	29 ⁽¹⁾	4.1 /1,000 live births and fetal deaths
Abortions	1,583	1,420 ⁽¹⁾	11.6 /1,000 population (women ages 15 to 44)
Marriages	5,320	N/A	8.6 /1,000 population ⁽²⁾
Divorces	2,262	N/A	3.6 /1,000 population ⁽²⁾
Civil Unions	352	N/A	⁽³⁾
Dissolutions	52	N/A	⁽³⁾

2007 population: 621,254

-
- (1) Does not include out-of-state occurrences
 - (2) Based on number of occurrences
 - (3) Rate less than 1

1. Resident data unless otherwise noted.
2. Population is the census population for those years when the census was taken and is the mid-year estimate for non-census years
NOTE: that mid-year population estimates are revised after each census is taken, so the 1991-1999 population figures and rates in this table differ from those presented in older publications.
3. Rate per 1000 population.
4. Rate per 1000 women ages 15-44.
5. Number of pregnancies includes Live Births and Fetal Deaths for 1857-1972, and Live Births, Fetal Deaths, and Abortions for 1973 - present.
6. Rate per 1000 Live Births.
7. Events per 1000 Live Births.
8. Data for these years is based on occurrence returns only.
9. 1857 population is the 1860 census population.
10. 1857 was the first year that town clerks were required to report vital events to the Secretary of State and returns for that year are incomplete.

BIRTHS

On July 1, 2005 Vermont implemented a revised birth certificate based on the 2003 revision of the U.S. Standard Certificate of Live Birth. Substantial changes which affected trends in data are explained in more detail throughout this text. Comparisons to U.S. white rates are made when possible, but in some cases comparisons can only be made to rates for the states which revised their birth certificates in 2007, or earlier. In those cases, comparisons will be made to the “revised states”.

In 2007, 6,514 babies were born to Vermont residents. This represents an increase of four births from 2006. Until 2002, the number of babies born to Vermont residents had declined every year since 1989. The crude birth rate in 2007 is 10.5 per 1,000 Vermont residents, the same as in 2004. The U.S. white birth rate for 2006 was 13.7 (2007 not available). Comparisons are made to the U.S. white rate because 95.7 percent of Vermont resident births were to white mothers in 2007 (Table B-5). The Vermont birth rate peaked in 1955 at 24 per 1,000 residents; it then dropped for two decades, remained relatively stable from the late 1970's through the 1980's, slowly and steadily decreased through the 1990's, and has continued a slow decline through this decade.

FERTILITY

Although the crude birth rate is based on the total population, a better measure of birth patterns is the fertility rate which is based on the population of women ages 15 through 44, the peak child-bearing years. The 2007 Vermont fertility rate was 53.1 per 1,000 women ages 15 through 44 (Table B-8), a slight increase from the 2006 rate of 52.1. The U.S. white fertility rate was 68.0 in 2006 (2007 not available). The fertility rate in Vermont peaked in 1960 at 126, declined through the 1960's and 1970's, leveled off slightly in the 1980's, steadily declined through the early 90's, and has remained fairly stable since 1995. Age-specific fertility rates have generally declined among the younger age groups (<30), and increased among the older age groups, with the largest increase among 30-34 year olds.

FIGURE 4
AGE-SPECIFIC FERTILITY RATES, SELECTED YEARS 1980-2007

AGES/ YEAR	1980	1990	2000	2007
TOTAL	63.3	60.6	49.7	53.1
15 – 19	38.5	34.1	23.4	22.2
20 – 24	102.4	93.9	74.1	73.6
25 – 29	113.0	114.6	102.1	106.1
30 – 34	60.2	79.5	84.0	90.1
35 – 44	12.5	19.6	21.3	23.9

Just about half of all births (51.9 %) in 2007 were to women in their twenties (Table B-7), up slightly from 49.4 percent in 2000. Women age 30 and over accounted for 40.5 percent of births, down from both 43.4 in 2006 and 43.9 percent in 2000. Women age 15 through 19 accounted for 7.6 percent of births, up from 7.2 in 2006, and down from 8.0 percent in 2000.

BIRTH WEIGHT

The median birth weight for all resident births in 2007 was 3,429 grams (approximately 7 pounds, 9 ounces).

Low birth weight infants are those born weighing less than 2,500 grams (5 pounds 8 ounces). They are much more likely than heavier babies to suffer short and long term disabilities, and to die in infancy. In 2007, 6.2 percent of Vermont resident births were low birth weight ([Table B-15](#)) and 1.0 percent were very low birth weight (less than 1,500 grams or 3 pounds 5 ounces). The U.S. white low birth weight rate for 2006 was 7.2 percent (2007 not available). The Vermont low birth weight rate remains above the *Healthy Vermonters 2010* goal of 5.0 percent and the very low birth weight rate is slightly above the *Healthy Vermonters 2010* goal of 0.9 percent.

Low birth weight rates vary by age groups ([Table B-15](#)): in Vermont, the low birth weight rate among women under age 20 was 7.0 percent, compared to 6.2 percent of births among women age 20-29 and 6.0 percent of births among women age 30 and older.

Infant birth weight is also positively associated with maternal weight gain: mothers who do not gain adequate weight during pregnancy are more likely to deliver low birth weight infants. On the other hand, there are risks associated with gaining too much weight including delivery complications, maternal and infant obesity. Although the weight gained by 20.2 percent of Vermont mothers in 2007 fell below the range recommended by the Institute of Medicine, 46.6 percent gained above the recommended range ([Table B-29](#)). Please refer to [Appendix B](#) for further information on the guidelines.

The single most important preventable risk factor for low birth weight is smoking during pregnancy. The low birth weight rate among women who smoked cigarettes during their pregnancy was 11.3 percent compared to 5.0 percent among women who did not smoke during pregnancy ([Table B-26](#)). The rate of women who reported smoking during pregnancy in 2007 was 18.6 percent, up slightly from 17.3 percent in 2006, and higher than 18.1 percent for non-Hispanic white mothers in the revised states for 2006 (2007 not available). Among those who smoked before pregnancy or during the first trimester, 28.8 percent quit.

PRENATAL CARE

Early, comprehensive, and high quality prenatal care is essential for a healthy pregnancy and birth. Through prenatal care, pregnant women are screened for medical conditions and counseled on nutrition, behavioral risks (such as using tobacco and alcohol), and domestic violence.

In 2007, 83.4 percent of the babies were born to mothers who began prenatal care in the first three months of pregnancy ([Table B-20](#)), a decrease from 83.7 percent in 2006 (which was at the *Healthy Vermonters 2010* goal). The calculation for month prenatal care began was changed in 2005 with the implementation of the new birth certificate. Analysis by the Vermont Department of Health shows that change in calculation for month prenatal care began reduces the rate of entry into first trimester prenatal care by about 7 percent. Please refer to [Appendix B](#) for more information. In general, the percentage of women receiving first trimester prenatal care has steadily increased since 1987. Vermont's rate in 2007 was higher than the 76.2 percent experienced by non-Hispanic white mothers in the revised states in 2006 (2007 not available).

The proportion of births in 2007 to Vermont mothers who delayed care to the third trimester or received no prenatal care was 2.5 percent, less than the 2.6 percent in 2006. The proportion of women receiving late or no prenatal care in 2006 was 5.2 percent for non-Hispanic white mothers in the revised states (2007 not available).

As in previous years, the age of the mother is closely associated with the time of entry to prenatal care with young women seeking care later than older women ([Table B-21](#)).

Based on the APNCU Index, in 2007, 87.0 percent of Vermont resident mothers received at least adequate prenatal care, ([Table B-30](#)). The percent of Vermont mothers who received inadequate care was 8.3. Teen mothers had the highest percent of inadequate care (15.8 percent) while mothers 30 and older had the highest percent of adequate plus intensive care (89.8 percent). U.S. rates for these measures are not available for comparison.

MEDICAL RISK FACTORS

Of those births with medical risk factors reported for the mother, the most common were previous pre-term births, gestational hypertension and gestational diabetes. The most common characteristics of labor and delivery were spinal anesthesia during labor, antibiotics received by mother during labor, induction of labor and augmentation of labor ([Table B-27](#)).

DELIVERIES

The format and wording of the Method of Delivery item was changed on the revised birth certificate, and preliminary analyses done by the National Center for Health Statistics indicate that “although data on total cesarean delivery appear very comparable, data on VBAC [vaginal birth after cesarean delivery], primary, and repeat cesarean deliveries are not directly comparable between revisions...”⁽¹⁾ Of babies born in Vermont hospitals in 2007, 27.8 percent were delivered by cesarean section ([Table B-25](#)) compared to 30.7 percent for U.S. white women in 2006 (2007 not available). The primary cesarean section rate was 19.8 percent in Vermont for 2007, lower than the 24.1 percent for non-Hispanic white mothers in the revised states in 2006 (2007 not available). Of mothers delivering in Vermont hospitals in 2007 who had a previous delivery by cesarean section, 17.6 percent had vaginal births, compared to 8.8 percent for non-Hispanic white mothers in the revised states in 2006 (2007 not available).

VERMONT RESIDENT PREGNANCIES

The pregnancy rate is derived by adding live births, fetal deaths and abortions. The pregnancy rates presented in this report underestimate the actual number of pregnancies for two reasons. First, Vermont resident abortions and fetal deaths that occur out of state are not reported to us. Second, by statute, fetal deaths prior to 20 weeks gestation are not reportable. Since residents of some counties may be more likely to use out-of-state services, the extent of these underestimates may differ among counties.

In 2007, the pregnancy rate in Vermont was 64.8 pregnancies per 1,000 women age 15 to 44 ([Table B-31](#)), an increase from 63.9 in 2006. Overall, the pregnancy rate peaked at 127.6 in 1960 then dropped steadily through the next four decades to a low of 60.3 in 2002 and has increased slightly over the past few years ([Table A-1](#)).

The 2007 teen pregnancy rate was 33.0 pregnancies per 1,000 women age 15 to 19 years ([Table B-31](#)), a slight increase from 32.8 in 2006. In general the teen pregnancy rate has been decreasing since 1991. In 2007, the highest pregnancy rate was seen in women 25 to 29 years of age at 123.3, followed by the 30 to 34 age group at 101.2. The lowest rate was for women age 35 to 44 at 27.8.

Deaths

Figure 8
VERMONT AND U.S. WHITE CRUDE DEATH RATES 1955-2007

Data points for the U.S. white population can be found in Appendix D. Vermont data points can be found in Table A-1.

DEATHS

There were 5,159 resident deaths in 2007, 114 more than in 2006. The crude death rate increased from 8.1 to 8.3 per 1,000 population. The death rate has fluctuated between 8.1 and 8.5 since 1988; prior to then it had been slowly declining from 11.2 in 1960, to 10.0 in 1970, down to 9.0 in 1980. The Vermont crude death rate was slightly higher than the U.S. white crude death rate until 1970 when the rates converged and remained similar through 1980. Since 1981, Vermont's death rate has been slightly lower than the U.S. white rate. The preliminary U.S. white rate for 2007 was 8.5. Comparisons are made to the U.S. white rate because 99.3 percent of Vermont residents who died in 2007 were white ([Table C-9](#)).

For the past 40 years, the two leading causes of death in Vermont have been heart disease and cancer. Heart disease and cancer accounted for 48.5 percent of the deaths in 2007 ([Table C-11](#)). The crude death rate for cancer (or malignant neoplasms) rose steadily through the 1980's and 1990's before starting to decline in this decade. After a high of 204.0 per 100,000 population in 2001, the rate decreased to 194.1 in 2006 before increasing to 215.7 in 2007. In contrast, the heart disease crude death rate peaked in the 1960's at 439.5 deaths per 100,000 population, but has decreased significantly since then. The rate for 2007 was 186.9 per 100,000 ([Table C-1](#)).

Chronic lower respiratory diseases (formerly referred to as chronic obstructive pulmonary diseases), the fourth leading cause of death in Vermont since 1985, moved up to the third leading cause in 2005. The crude death rate for this cause has increased over the past twenty plus years from 33.0 in the period from 1979 to 1981 to 50.9 in 2000. In 2006, the rate declined to 51.3. This followed a sharp increase in 2005 to 61.0 from a rate of 48.6 in 2004. In 2007, the rate was 51.9, continuing the decline seen in 2006.

Accidents (or unintentional injuries) maintained its position as the fourth leading cause of death in Vermont, after moving up from the fifth leading cause in 2005. The crude death rate for accidents peaked at 58.4 in the period from 1969 to 1971, and declined to 31.3 in 1994 to 1996. Since the mid 1990's however, the death rate from accidents has increased. The crude rate for 2007 was 48.0.

Cerebrovascular diseases, or stroke, dropped from the third leading cause of death in 2004 to the fifth leading cause beginning in 2005. The crude death rate for cerebrovascular diseases has dropped significantly from its' peak of 131.9 in the early 1960's to 43.1 in 2007.

The crude death rate from Alzheimer's disease steadily increased throughout the 1990's and into this decade, resulting in movement up from the tenth to the seventh leading cause of death in 1999. In 2004, Alzheimer's disease moved up to the sixth leading cause of death, and has remained there through 2007. The crude death rate for Alzheimer's disease in 2007 was 33.0.

Diabetes remained the seventh leading cause of death in Vermont in 2007. Though the rate has fluctuated in recent years; generally, Vermont has experienced an increasing trend in the crude death rate for diabetes over the past fifteen years. The rate increased from 22.0 in the period 1989 to 1991 to 26.9 in 2000 and 29.6 in 2003, before declining to 24.0 in 2004, and increasing to 27.4 in 2007.

Intentional self-harm (or suicide) remained the eighth leading cause of death in 2007 and continued the recent trend of increasing crude death rates with a rate of 14.2 per 100,000. This is up from 13.1 in 2006 and 12.0 deaths per 100,000 in 2005.

Influenza and pneumonia remained in the ninth position in 2007, after dropping from eighth in 2006, with a crude death rate of 11.1 deaths per 100,000. This is a decrease from 12.2 in 2006 and 15.6 deaths per 100,000 in 2005.

Parkinson's disease replaced Chronic Liver Disease and Cirrhosis as the tenth leading cause of death in Vermont in 2007, with a crude rate of 8.9 deaths per 100,000 population.

The leading causes of death varied with age (Table C-2) and (Table C-14). Unintentional injuries were the leading cause of death for people age 15 to 44. Cancer was the leading cause of death, followed by heart disease for 45-84 year olds, and at ages 85 and higher, the causes were reversed with heart disease as the leading cause, followed by cancer.

Death rates dramatically increase after age 75. While people age 75 and over comprised only 6.6 percent of the total population, they accounted for 60.8 percent of total deaths. Except for accidents and influenza and pneumonia, the leading causes of death in this age group were all chronic diseases.

The leading causes of death varied by sex as well (Table C-1) and (Table C-11). The top three causes for males were: cancer, heart disease and accidents. For females they were: cancer, heart disease, and stroke.

Chronic lower respiratory diseases, cerebrovascular diseases and diabetes ranked fourth, fifth, and sixth for males, while chronic lower respiratory diseases, Alzheimer's disease, and accidents were the fourth, fifth, and sixth leading causes of death for females.

Suicide and Alzheimer's disease were the seventh and eighth leading cause of death among males, while diabetes and influenza and pneumonia were ranked seventh and eighth for females.

Influenza and pneumonia and Parkinson's disease were the ninth and tenth leading causes for males, and Parkinson's disease and suicide were ranked ninth and tenth among females.

Deaths occurring in a hospital accounted for 38.6 percent of Vermont resident deaths (Table C-17), down from 62 percent in 1980, 53 percent in 1990 and 41.2 percent in 2000. In 2007, 27.3 percent of Vermont resident deaths occurred at home, and 24.8 percent occurred in a nursing home.

Figure 9
FIVE LEADING CAUSES OF DEATH IN 2007,
FOR VERMONT AND U.S. WHITE POPULATION

Vermont death rates are age-adjusted to the 2007 U.S. white population. U.S. white rates are the 2006 crude death rates.

(1) CAUSE OF DEATH IS CODED BY THE INTERNATIONAL CLASSIFICATION OF DISEASES. DEATHS IN 1979 TO 1988 WERE CODED ACCORDING TO ICD-9. EFFECTIVE JANUARY 1, 1989 DEATHS WERE CODED ACCORDING TO ICD-10. SINCE SIGNIFICANT CHANGES WERE MADE IN ICD-10, THE CODE NUMBERS FOR ICD-9 AND ICD-10 ARE GIVEN IN ADDITION TO COMPARABILITY RATIOS WHICH HAVE BEEN APPLIED TO THE EARLIER RATES TO MAKE THEM COMPARABLE TO THE ICD-10 RATES.

Infant Deaths, Fetal Deaths and Abortions

Figure 10a
VERMONT AND U.S. WHITE
INFANT AND NEONATAL MORTALITY RATES
1955 - 2007

Data points for the U.S. white population can be found in Appendix D. Vermont data points can be found in Table A-1.

Figure 10b
VERMONT AND U.S. WHITE
FETAL MORTALITY RATES
1955 - 2007

Data points for the U.S. white population can be found in Appendix D. Vermont data points can be found in Table A-1. The 2006 and 2007 U.S. white rates are not available at this time.

INFANT DEATHS, FETAL DEATHS, AND ABORTIONS

INFANT DEATHS

In 2007, there were 33 resident infant deaths for a rate of 5.1 infant deaths per 1,000 live births. The rate is above the *Healthy Vermonters 2010* goal of 4.5, but lower than the preliminary 2007 U.S. white rate of 5.7. Comparisons are made to the U.S. white rate because 91.0 percent of the Vermont resident infant deaths were to whites in 2007. The Vermont infant mortality rate steadily declined from 24.0 in 1960 to 5.8 per 1,000 live births in 1991. Over the past two decades the rate has fluctuated between a high of 7.4 in 1994 and a low of 4.2 in 2002. ([Table A-1](#))

Twenty (55.6 percent) of the infant deaths occurred during the neonatal period, that is before the infant became 28 days old ([Table D-6](#)). The neonatal death rate was 3.1 deaths per 1,000 live births ([Table D-5](#)), lower than the 2006 U.S. white neonatal death rate of 3.7. The Vermont neonatal death rate has decreased over the past four decades from 18.6 in 1960, to 14.4 in 1970, to 6.2 in 1980, to 3.6 in 1990 ([Table A-1](#)). Following an increasing trend through the nineties to a high of 5.9 in 1998, the rate has fluctuated throughout this decade.

One of the most important risk factors in infant mortality is low birth weight ([Table D-7](#)). Of resident infants who died in 2007, 63.6 percent had a birth weight less than 2500 grams (5 pounds 8 ounces), while 6.2 percent of all resident births were low weight. The infant mortality rate for low weight births was 52.1 deaths per 1,000 live births. Age of mother is also related to infant mortality ([Table D-5](#)), with the highest rates typically seen in the youngest and the oldest age groups. From 2005 to 2007, the infant mortality rate for mothers 15 through 19 years of age was 9.3, and for mothers age 40 through 44 the rate was 13.5. The 40 to 44 year old maternal age group had the highest neonatal death rate at 5.1.

FETAL DEATHS

Unlike births and deaths, reports of fetal deaths and abortions are not shared among states. Therefore, statistics concerning these events reflect occurrences in Vermont only and do not include Vermont resident fetal deaths and abortions that occurred in other states.

There were 29 resident fetal deaths in 2007 ([Table D-1](#)) for a rate of 4.1 per 1,000 live births and fetal deaths, down from 4.6 per 1,000 live births and fetal deaths in 2006 ([Table D-5](#)) and the first decrease since 2003. Of the fetal deaths in Vermont, 17 weighed less than 2500 grams ([Table D-7](#)). From 2005 to 2007, the fetal death rates were highest in the 30 and over age groups: 5.1 for women age 40 to 44, and 30 to 34 and 4.7 per 1,000 live births for women age 35 to 39 ([Table D-5](#)).

VERMONT ABORTIONS

There were 1583 abortions performed in Vermont in 2007, a third consecutive decrease following three years of consecutive increases. Vermont residents accounted for 1420, or 89.7 percent. This represents a rate of 11.6 per 1,000 women age 15 to 44.

The abortion ratio is the number of resident abortions occurring in Vermont times 1,000, divided by the total resident live births. The abortion ratio for 2007 was 218.0 abortions per 1,000 live births, lower than the 2006 ratio of 223.7, and the lowest since 2001. The U.S. white abortion ratio was 162 per 1,000 live births in 2006 (not available for 2007).

Women age 20 to 24 had the highest *age-specific* abortion rate, of 28.5 per 1,000 women, followed by women age 25 to 29 at 18.5. First trimester abortions (less than or equal to 12 weeks) accounted for 93.5 percent of all Vermont abortions and 68.1 percent of all Vermont abortions were for pregnancies of less than 9 weeks duration (Table E-5). See Appendix B for the method used to compute the number of weeks of gestation.

Figure 11
VERMONT AND U.S. WHITE ABORTION RATIOS
1975 - 2007

Data points for the U.S. white population can be found in Appendix D. Vermont data points can be found in Table A-1. U.S. ratios are based on reporting states.

NOTES:

Fetal and perinatal death rates are the number of resident fetal deaths and perinatal deaths per 1,000 resident live births and fetal deaths.

Neonatal and infant death rates are the number of resident neonatal deaths and infant deaths per 1,000 resident live births.

Data for the years 2005-2007 have been combined to produce more stable rates.

Marriages and Divorces

Figure 12
VERMONT AND U.S. MARRIAGE AND DIVORCE RATES
1955 - 2007

Data points for the U.S. population can be found in Appendix D. Vermont data points can be found in Table A-1.

MARRIAGES & DIVORCES

MARRIAGES

In 2007, 5,320 marriages were performed in Vermont, 35 less than in 2006. The 2007 Vermont rate was 8.6 per 1,000 of population, matching the 2006 Vermont rate, and the lowest rate in Vermont in more than 20 years, but higher than the 2007 U.S. provisional rate of 7.3. Marriages between two out-of-state residents accounted for 32.1 percent of the marriages in Vermont (Table F-2).

There was the usual seasonal variation with more marriages occurring in summer than in any other season. August (857) was the most popular month for marriages in 2007 (Table F-7).

More than half (56.3 percent) of the marriages were firsts for both bride and groom (Table F-5). For the brides, 67.3 percent were first marriages, and for the grooms, 66.0 percent were first marriages. Remarriages for both bride and groom accounted for 23.0 percent of marriages in Vermont.

The percentage of civil ceremonies decreased to 58.5 percent in 2007 (Table F-8).

DIVORCES

There were 2,262 divorces granted in 2007, a decrease of 137 from 2006. This represents a rate of 3.6 per 1,000 residents, equal to the 2007 U.S. provisional rate.

The median length of marriages ending in divorce was 9 years 9 months, with a range of 1 month to 54 years 9 months. Almost fifty nine (58.9) percent of divorces followed a separation of a year or longer (Table G-3). The median age at the time of divorce was 40 for women with a range of 19 to 84 years. The median age at the time of divorce was 42 for men with a range of 15 to 87 years.

Civil Unions and Dissolutions

CIVIL UNIONS AND DISSOLUTIONS

CIVIL UNIONS

In 2007, 352 civil unions were established in Vermont, down from 429 in 2006. The highest number (49) occurred in August.

Civil unions involving out-of-state residents accounted for 67.9 percent of the total number of civil unions (Table H-2). The states with the largest number of residents who established civil unions were New York, Florida and New Hampshire (Table H-1). The largest number of Vermont residents who established civil unions resided in Chittenden County (Table H-2).

Sixty-nine percent of the civil unions were between female partners, and the most common age group for female partners was 30 to 34, and for male partners it was 40 to 44 (Table H-4). Civil union partners tend to be highly educated: 54.0 percent completed at least four years of college (Table H-5).

Table H-6, shows the total number of civil unions or marriages, including the current civil union, that each person has been a party to during their lives. For 73.9 percent of the civil union partners, this was their first union, or marriage.

DISSOLUTIONS

The dissolution of civil unions follows the same procedures, same requirements, rights, and obligations as divorces. There were 52 dissolutions in 2007.

APPENDIX B

OBSTETRIC DATES AND INTERVALS AND WEIGHT GAIN RECOMMENDATIONS

MONTH PRENATAL CARE BEGAN

Since 1988, the Vermont Department of Health has used the National Center for Health Statistics method of calculating the month prenatal care began. This allows Vermont data to be more easily compared to national data, and eliminates any errors that could be introduced by hospitals using different reporting methods.

The calculation for month prenatal care began changed at the national level with the 2003 Revision of the U.S. Standard Certificate of Live Birth. Vermont implemented its' new birth certificate on July 1, 2005, based on the 2003 Revision of the U.S. Standard, so the Department of Health began using the new calculation in 2005. The new calculation converts to century dates the date of last menses and the date of the first prenatal visit, determines the difference in number of days between these dates, and then converts the days to months of pregnancy. For example, if the date of last menses was March 15, 2005 and the date of the first prenatal visit was June 30, 2005, then the difference is 107 days which means that prenatal care began in the fourth month.

Please note that this change in calculation affects the rate of entry into first trimester prenatal care. Analysis done by the Vermont Department of Health shows that this change in calculation reduces the rate of entry into first trimester prenatal care by about 7%, so rates for years 2005 and later should not be compared to rates for prior years.

GESTATIONAL AGE

Live Births and Fetal Deaths: The methodology used to determine gestational age matches that used by the National Center for Health Statistics.

Two measures of gestational age are available from the standard certificates. The standard certificates collect information on the first day of the mother's last menstrual period (LMP). The interval between the LMP and the date of birth is the *calculated* gestational age. The standard certificate also collects a *clinical estimate* of gestation.

The primary measure used by NCHS to determine the gestational age of the newborn is the *calculated* weeks of gestation. However this method is subject to error due to imperfect maternal recall and to misidentification of the LMP. Therefore an edit is run that checks whether the calculated weeks of gestation is consistent with the infant's plurality and birth weight. If the birth weight is within the bounds for the calculated weeks of gestation, then the *calculated* weeks of gestation becomes the assigned gestational age. If the birth weight is not within the bounds for the calculated weeks, but it is within the bounds for the clinical estimate of gestation, then the *clinical estimate* of gestation is assigned as the gestational age. If the birth weight does not fit within the bounds for either the calculated weeks of gestation or the clinical estimate of gestation, the gestational age is designated "unknown". If the month and year for LMP are given, but the day is missing, the gestational age is *imputed* using the gestational age of the preceding record that has complete data with the same computed month of gestation and the same 500-gram birth weight interval.

In 2007, 88.2 percent of the Vermont resident records used the *calculated* weeks, 11.8 percent used the *clinical estimate* of the weeks, and 2 records were designated "*unknown*" gestational ages.

Abortions: Gestational age is calculated from the date of last normal menses and date of abortion. The clinically estimated weeks is used if the date of last normal menses is unknown, or if the calculated weeks and the clinically estimated weeks are more than two weeks apart.

WEIGHT GAIN DURING PREGNANCY

The weight gain guidelines reflected in this report were taken from Nutrition During Pregnancy, Institute of Medicine, National Academy of Sciences, 1990. The recommendations are as follows:

PRE-PREGNANCY BMI	RECOMMENDED WEIGHT GAIN
< 19.8	28 - 40 lbs
19.8 - 26.0	25 - 35 lbs
26.1 - 29.0	15 - 25 lbs
> 29.0	15 - 25 lbs
Multiple births	35 - 45 lbs

.. Acute and rapidly progressive nephritic and nephrotic syndrome	N00-N01, N04	580-581

APPENDIX C

DEFINITIONS OF THE 113 SELECTED CAUSES OF DEATH

Causes of Death	Category Codes According to the <i>International Classification of Diseases</i>	
	Tenth Revision	Ninth Revision Adapted
.. Chronic glomerulonephritis, nephritis and nephropathy not specified as acute or chronic, and renal sclerosis unspecified	N02-N03, N05-N07, N26	582-583, 587
.. Renal failure	N17-N19	584-586
.. Other disorders of kidney	N25, N27	588-589
Infections of kidney	N10-N12, N13.6, N15.1	590
Hyperplasia of prostate	N40	600
Inflammatory diseases of female pelvic organs	N70-N76	614-616
Pregnancy, childbirth and the puerperium	O00-O99	630-676
.. Pregnancy with abortive outcome	O00-O07	630-639
.. Other complications of pregnancy, childbirth and the puerperium	O10-O99	640-676
Certain conditions originating in the perinatal period	P00-P96	760-771.2, 771.4-779
Congenital malformations, deformations and chromosomal abnormalities	Q00-Q99	740-759
Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified	R00-R99	780-799
All other diseases (Residual)	Residual	Residual
Accidents (unintentional injuries)	V01-X59, Y85-Y86	E800-E869, E880-E929
.. Transport accidents	V01-V99, Y85	E800-E848, E929.0-E929.1
.. Motor vehicle accidents	V02-V04, V09.0, V09.2, V12-V14, V19.0-V19.2, V19.4-V19.6, V20-V79, V80.3-V80.5, V81.0-V81.1, V82.0-V82.1, V83-V86, V87.0-V87.8, V88.0-V88.8, V89.0, V89.2	E810-E825
.... Other land transport accidents	V01, V05-V06, V09.1, V09.3-V09.9, V10-V11, V15-V18, V19.3, V19.8- V19.9, V80.0-V80.2, V80.6-V80.9, V81.2- V81.9, V82.2-V82.9, V87.9, V88.9, V89.1, V89.3, V89.9	E800-E807, E826-E829

APPENDIX C

DEFINITIONS OF THE 113 SELECTED CAUSES OF DEATH

Causes of Death	Category Codes According to the <i>International Classification of Diseases</i>	
	Tenth Revision	Ninth Revision Adapted
.... Water, air and space, and other and unspecified transport accidents and their sequelae	V90-V99, Y85	E830-E848, E929.0, E929.1
.. Nontransport accidents	W00-X59, Y86	E850-E869, E880-E928, E929.2-E929.9
.... Falls	W00-W19	E880-E888
.... Accidental discharge of firearms	W32-W34	E922
.... Accidental drowning and submersion	W65-W74	E910
.... Accidental exposure to smoke, fire and flames	X00-X09	E890-E899
.... Accidental poisoning and exposure to noxious substances	X40-X49	E850-E869, E924.1
.... Other and unspecified nontransport accidents and their sequelae	W20-W31, W35-W64, W75-W99, X10-X39, X50-X59, Y86	E900-E909, E911-E921, E923-E924.0, E924.8-E928, E929.2-E929.9
Intentional self-harm (suicide)	X60-X84, Y87.0	E950-E959
.. Intentional self-harm (suicide) by discharge of firearms	X72-X74	E955.0-E955.4
.. Intentional self-harm (suicide) by other and unspecified means and their sequelae	X60-X71, X75-X84, Y87.0	E950-E954, E955.5-E959
Assault (homicide)	X85-Y09, Y87.1	E960-E969
.. Assault (homicide) by discharge of firearms	X93-X95	E965.0-E965.4
.. Assault (homicide) by other and unspecified means and their sequelae	X85-X92, X96-Y09, Y87.1	E960-E964, E965.5-E969
Legal intervention	Y35, Y89.0	E970-E978
Events of undetermined intent	Y10-Y34, Y87.2, Y89.9	E980-E989
.. Discharge of firearms, undetermined intent	Y22-Y24	E985.0-E985.4
.. Other and unspecified events of undetermined intent and their sequelae	Y10-Y21, Y25-Y34, Y87.2, Y89.9	E980-E984, E985.5-E989
Operations of war and their sequelae	Y36, Y89.1	E990-E999
Complications of medical and surgical care	Y40-Y84, Y88	E870-E879, E930-E949

APPENDIX D

VITAL STATISTICS SUMMARY FOR U.S. WHITE POPULATION
1955 - 2007

YEAR	CRUDE BIRTH RATE (1)	FERTILITY RATE (1)	LOW BIRTH WEIGHT PERCENT	CRUDE DEATH RATE (2)	INFANT DEATH RATE (3)	NEONATAL DEATH RATE (3)	FETAL DEATH RATE (3)	ABORTION RATIO (4)	MARRIAGE RATE (5)	DIVORCE RATE (5)

1998	13.8	63.6	6.6	9.0	6.0	4.0	5.7	188	8.4	3.5
1999	13.7	64.0	6.6	9.2	5.8	3.9	5.7	177	8.6	4.1
2000	13.9	65.3	6.6	9.0	5.7	3.8	5.6	167	8.2	4.1
2001	13.7	65.0	6.8	9.0	5.7	3.8	5.5	165	8.2	3.9
2002	13.5	64.8	6.9	9.0	5.8	3.9	5.5	164	7.8	4.0
2003	13.6	66.1	7.0	8.9	5.7	3.9	5.2	165	7.5	3.8
2004	13.5	66.1	7.2	8.6	5.7	3.8	5.3	161	7.8	3.7
2005	13.4	66.3	7.3	8.7	5.7	3.8	5.3(9)	158	7.7	3.7
2006	13.7(6)	68.0(6)	7.2(7)	8.6	5.6	3.7	n/a(10)	162(11)	7.3	3.6
2007	n/a(10)	n/a(10)	n/a(10)	8.5(6)	5.7(8)	3.7(8)	n/a(10)	n/a(10)	7.3(12)	3.6(12)

1. 1955-1975 rates based on race of child; 1980-1992 were previously reported by race of child, now reported by race of mother. Crude birth rates are per 1000 population. Fertility rates are per 1000 women aged 15-44.

2. Crude death rates are per 1000 population.

3. Rates are per 1000 live births. Fetal death rate is per 1000 live births plus fetal deaths.

4. Ratio is per 1000 live births.

5. Data are for all races. Rates are per 1000 population.

6. National Center for Health Statistics "Births: Final Data for 2006". National Vital Statistics Reports, Vol. 57 No. 7, January 7, 2009, Table 1.

7. Centers for Disease Control and Prevention. National Center for Health Statistics. VitalStats. <http://www.cdc.gov/nchs/vitalstats.htm>. March 8, 2010.

8. National Center for Health Statistics "Deaths: Preliminary Data for 2007". National Vital Statistics Reports, Vol. 58, No. 1, August 19, 2009, Tables 1 and 4.

9. National Center for Health Statistics "Fetal and Perinatal Mortality, United States, 2005". National Vital Statistics Reports, Vol. 57, No. 8, Jan 28, 2009.

10. U.S. White rate unavailable at this time.

11. Centers for Disease Control and Prevention. "Abortion Surveillance - United States, 2006." November 27, 2009 / 58(SS08):1-35; Table 10. <http://www.cdc.gov/mmwr/preview/mmwrhtml/ss5808a1.htm>

12. National Vital Statistics Report "Births, Marriages, Divorces and Deaths: Provisional Data for 2007" Vol. 56, No. 21, July 14, 2008, Table A.
