

## **ALERT! New Vaccines on the IMR Grid!**

The Immunization Registry has several new vaccines on its list. Please use care when you are entering data.

We've added a NEW COMBINATION VACCINE to the list: **Kinrix**, which contains DTaP and Polio.

ROTAVIRUS now comes in two varieties: **Rotarix** (a new 2 dose vaccine), and **Rotateq** (the 3 dose vaccine). Both are being distributed in Vermont. The Advisory Committee on Immunization Practices (ACIP) recommends that rotavirus vaccine series be completed with the same product where possible. However, vaccination should not be deferred because the product used for the previous dose is unavailable or unknown. If any of the doses given was the 3 dose product, or unknown, three doses should be administered.

IMR Label	Brand Name
DTaP-IPV	Kinrix
Rotavirus (2 dose) RV1	Rotarix
Rotavirus (3 dose) RV5	Rotateq
