## Note

1. Cumulative data has been available only since 2003, and therefore likely under-represents the actual number of cases currently in Vermont. It is also important to note that many people living with Hepatitis C are unaware of their status and are not represented in these numbers.
2. Cases initially reported as either chronic/resolved or acute.
3. Year of report to the Vermont Department of Health.
4. A Chronic/Resolved case, as defined by the Centers for Disease Control and Prevention, is laboratory-confirmed with no acute signs and symptoms of viral hepatitis.
5. An Acute case, as defined by the Centers for Disease Control and Prevention, is confirmed with a positive HCV test with discrete onset of symptoms consistent with acute viral hepatitis, and jaundice or elevated serum aminotransferase levels seven times the upper limit of normal.

Hepatitis C HOTLINE (800) 244-7639 (VOICE) (800) 319-3141 (TTY)
