Hemophilia/Coagulation disorder	≤3	<1%	≤3	33%		25%	≤3	14%	3%		
Other/risk not reported or identified	≤3	100%	≤3	<1%		25%	≤3	14%	2%		
Total	≤3	100%	≤3	100%		100%	7	100%	100%		

Notes

- Includes only persons reported with HIV infection who have not developed AIDS.
- A total of 185 cases of HIV infection have been reported to the Vermont Department of Health. Of these, 178 are believed to be living.
- Vermont data include only those people who were residents of Vermont at the time of initial diagnosis.
- The HIV/AIDS Surveillance Program does not typically release data with values ≤3.
- Race/Ethnicity is unknown for one individual living with HIV.
- Sources of US Data: CDC. HIV/AIDS Surveillance Supplemental Report, 2001. 7(No.1), 2001 and CDC. HIV/AIDS Surveillance Report, 2001. 13(No.2), 2001.
- National data are available for different age categories and are not directly comparable.
- National data are currently available for different race and ethnicity categories and are not directly comparable. This is due to a recent reporting change implemented by CDC; future US reports that include 2003 data will have a comparable format.
- Source of US Data: CDC. HIV/AIDS Surveillance Report, 2001. 13(No.2), 2001.
- These exposure categories are all included in the category "Other" in the national data.
- National pediatric data among persons living with AIDS, categorized by mode of exposure, are not currently available.
