Mother with/at risk for HIV infection	≤3	<1%	≤3	20%	N/A ¹⁰	17%	4	50%	91%			
Receipt of blood transfusion or tissue	≤3	<1%	≤3	20%		17%	≤3	13%	4%			
Hemophilia/Coagulation disorder	≤3	<1%	≤3	20%		17%	≤3	13%	3%			
Other/risk not reported or identified	≤3	100%	≤3	40%		50%	≤3	25%	2%			
Total	≤3	100%	5	100%		100%	8	100%	100%			

Notes

1. Includes only persons reported with HIV infection who have not developed AIDS.
2. A total of 203 cases of HIV infection have been reported to the Vermont Department of Health. Of these, 194 are believed to be living.
3. Vermont data include only those people who were residents of Vermont at the time of initial diagnosis.
4. The HIV/AIDS Surveillance Program does not typically release data with values ≤3.
5. Race/Ethnicity is unknown for one individual living with HIV.
6. Source of US Data: Centers for Disease Control and Prevention (CDC) HIV/AIDS Surveillance Report 2002:14.

7. National data are available for different age categories and are not directly comparable.
8. National data are currently available for different race and ethnicity categories and are not directly comparable. This is due to a recent reporting change implemented by CDC; future US reports that include 2003 data will have a comparable format.
9. These exposure categories are all included in the category "Other" in the national data.
10. National pediatric data among persons living with AIDS, categorized by mode of exposure, are not currently available.
