**Notes**

- Includes only persons reported with HIV infection who have not developed AIDS.
- A total of 190 cases of HIV infection have been reported to the Vermont Department of Health. Of these, 181 are believed to be living.
- Vermont data include only those people who were residents of Vermont at the time of initial diagnosis.
- The HIV/AIDS Surveillance Program does not typically release data with values ≤3.
- Race/Ethnicity is unknown for one individual living with HIV.
- Source of US Data: Centers for Disease Control and Prevention (CDC) HIV/AIDS Surveillance Report 2002;14.
- National data are available for different age categories and are not directly comparable.
- National data are currently available for different race and ethnicity categories and are not directly comparable. This is due to a recent reporting change implemented by CDC; future US reports that include 2003 data will have a comparable format.
- These exposure categories are all included in the category "Other" in the national data.
- National pediatric data among persons living with AIDS, categorized by mode of exposure, are not currently available.
