Total	1	100%	5	100%	100%	100%	8	100%	100%

**Notes**

- Includes only persons reported with HIV infection who have not developed AIDS.
- A total of 238 cases of HIV infection have been reported to the Vermont Department of Health. Of these 209 are believed to be living.
- Vermont data include only those people who were residents of Vermont at the time of initial diagnosis.
- For confidentiality reasons the HIV/AIDS Surveillance Program does not typically release data with values ≤3.
- The Ethnicity and Multi-race categories were not pieces of demographic information collected until recent years.
- Source of US Data: Centers for Disease Control and Prevention (CDC) HIV/AIDS Surveillance Report,2003 (Vol.15)

- National data are available for different age categories and are not directly comparable.
- National data are available for different race and ethnicity categories and are not directly comparable.
- These exposure categories are all included in the category "Other" in the national data.
- Estimated numbers after adjusting reported cases for reporting delays and redistribution of cases initially reported with unidentified risk.
