

Generally, data are for 2008-2010 or 2006-2010, depending on the sample size. If measure not asked in each year, data are for the three most recent years the measure was assessed. The right-most column, "Years Used", indicates the specific years the item was collected.

Values of "NA" means data not available due to small sample size (e.g. fewer than five respondents in the numerator and/or less than 50 in the denominator).

Items highlighted in blue are significantly different from the value for Vermont, over the corresponding number of years. If the county value is for the years 2008-2010, each county was then compared to the Vermont value for that same time period.

All values are age adjusted to the year 2000 standard population, unless otherwise noted.

*Vermont data are for 2010 except for values related cholesterol screening, arthritis, maternal, infant and children's health, nutrition and physical activity. These are for 2009.

**Data are different than in years past. The population asked the question in 2009 was different than in years past.

***Data are different than in years past. The algorithm used to calculate the proportion of 18-44 women who take Folic acid regularly was adjusted.

#Crude rate; not age adjusted
