# 1 DURING PREGNANCY

## Planning to feed your baby

- Learn about the importance of feeding your baby your milk.
- Discuss your plans for feeding your baby with your health care provider(s).
- Prepare for lifestyle changes, such as quitting smoking, drinking, or using substances, and seek support for these changes.
- Connect with a peer counselor before the birth.
- Call Medicaid or your private insurance provider to learn what benefits are available to support birth and infant feeding. Ask about:
  - Childbirth & breastfeeding/chestfeeding classes
  - In-home lactation consults
  - Breast pump

Nursing is normal and natural, but you and your baby may need help as you learn how to do it. WIC can help if there are challenges.

# 2 PREPARING FOR THE BIRTH

## Getting off to a great start

- Talk to your partner, family, and friends about how you plan to feed breast milk and for how long.
- Learn about birth options and their potential effect on infant feeding.
- Attend a prenatal breastfeeding/chestfeeding class.
- Watch breastfeeding videos at home with your family to prepare for feeding [healthvermont.gov/breastfeeding/success](http://healthvermont.gov/breastfeeding/success), [wicbreastfeeding.fns.usda.gov](http://wicbreastfeeding.fns.usda.gov), and [firstdroplets.com](http://firstdroplets.com)
- Complete the Infant Feeding Plan (from the back of the Hospital Experience booklet) and bring to the hospital.

# 3 THE HOSPITAL STAY

## Making the most of your hospital stay

- Hold your baby skin-to-skin right after birth.
- Feed your baby at the breast/chest within the first hour.
- Express colostrum (first milk) if your baby does not latch in the first hour.
- Express your own or request pasteurized donor human milk if your baby needs supplemental human milk.
- Room-in with your baby in the hospital.
- Limit visitors so you can rest and learn how to nurse your baby.
- Call for help if your baby has trouble latching.

# 4 THE FIRST WEEKS AT HOME

## Nursing baby is easy & natural, but challenges are common

- Continue holding your baby skin-to-skin as often as possible.
- Contact your health care provider or lactation consultant if your baby has difficulty latching on or if your nipples are sore.
- Sleep or rest when your baby sleeps.
- Identify who can help with house work and child care (if you have older children at home.)
- Check out MealTrain.com – a free website to organize meal giving and receiving.

# 5 THE NEXT FEW MONTHS

## Preparing to spend time away from your baby

- Learn to express, collect and store milk for when you are away from your baby.
- Talk with your employer about supporting your infant feeding goals and milk expression after returning to work.
- Choose a child care provider who understands and supports the importance of offering expressed milk.
- Practice ways to nurse discreetly if you are not comfortable feeding your baby in front of others.
- Ask your health care provider for a prescription for a breast pump that will meet your needs. Medicaid or private insurance may cover a pump.

### I WILL CHECK-IN WITH MY PEDIATRICIAN OR LACTATION CONSULTANT IF:

- My baby acts fussy when we nurse and does not seem satisfied after most feedings.
- My baby is not nursing at least 8 times every 24 hours.
- My nipples hurt during feeding, even after my baby is first latched on.
- I can't hear my baby gulping or swallowing, or I can't tell.
- I think I'm not making enough milk.
- I think my baby isn't gaining weight.

### SIGNS THAT FEEDING IS GOING WELL & I'M MAKING ENOUGH MILK:

- My baby is nursing at least 8-12 times every 24 hours.
- My baby is having 3-4 poops and 6-8 wet diapers each day.
- I can hear my baby gulping or swallowing at feedings.
- My nipples do not hurt when my baby nurses.
- My baby is receiving only my milk (no water, sugar water or formula).

# MY GOAL

My goal is to feed my baby my milk for \_\_\_\_\_ months.

# WELCOME BABY!

Baby's name: \_\_\_\_\_

Birthday: \_\_\_\_\_ Time of birth: \_\_\_\_\_

Birth weight: \_\_\_\_\_ Discharge weight: \_\_\_\_\_

Baby's weight at check-up 2 days after discharge: \_\_\_\_\_

*(It is common to lose up to 7% from birth)*

Baby's second week weight: \_\_\_\_\_

*(Baby should regain birth weight by 10 - 14 days)*
