Nurse staffing is measured by nursing care hours per patient day (the number of nursing care hours relative to the patient workload). This measure was developed by the American Nurses Association for the National Database of Nursing Quality Indicators.
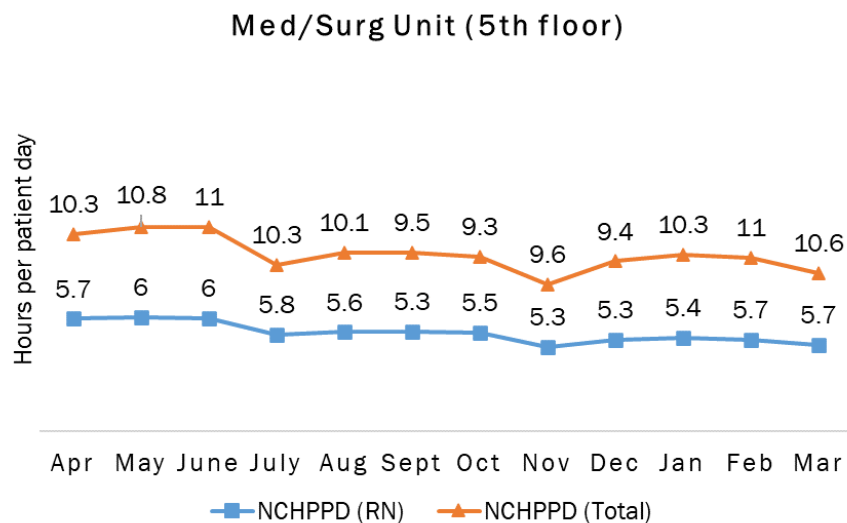

There is no national standard for optimal nurse staffing level. This is due to varying factors like intensity of patient's needs, the number of admissions, discharges and transfers during a shift, level of experience of nursing staff, layout of the unit and availability of resources (ancillary staff, technology etc.).

Medical/Surgical Unit (5th Floor)

The Medical/Surgical Unit, also known as the Medical/Oncology Unit, has 35 licensed beds and cares for adult patients. Types of services provided in this setting include care of people with general medical and surgical problems, end of life comfort care, and care of people with cancer.

### Nursing Care Hours per Patient Day (NCHPPD): April 2023 - March 2024

This graph shows the average number of direct nursing care hours provided per patient during a 24-hour period. Results are shown for care provided by registered nurses (RNs) and by all nursing staff (total) per month.
