VERMONT VITAL STATISTICS ANNUAL REPORT 2022

July 2024

State of Vermont
Phil Scott, Governor

Agency of Human Services
Jenney Samuelson, Secretary

Department of Health
Mark Levine, MD, Commissioner

We gratefully acknowledge the contributions of the medical records staff, physicians and midwives, funeral directors, lawyers, and court clerks for their help in collecting and providing us with this data.

We also recognize the town and city clerks, who are our local registrars. Without them, these analyses of Vermont's vital statistics would not be possible.

INTRODUCTION

Figure 1. Vermont County Map

THE VERMONT VITAL STATISTICS SYSTEM

Statewide vital registration began in Vermont in 1857, when the General Assembly passed a bill requiring that towns report to the Secretary of State all births, marriages, and deaths occurring in their jurisdiction. Prior to that time, some towns kept such records to resolve questions concerning the distribution and inheritance of property. Vital records, particularly death records, gradually became recognized as an important tool in studying the location and spread of epidemics. In 1896, the Legislature transferred responsibility for the vital statistics system to the newly formed Board of Health, the forerunner of the Vermont Department of Health. The Department of Health has retained this responsibility to the present day.

The Vermont vital statistics system monitors the following vital events: births, deaths, marriages, divorces and dissolutions, fetal deaths, and abortions. Each type of vital record follows a different path before being used to produce the statistics published here.

Births: When a birth occurs, the physician, midwife, or other birth attendant is required to report the birth within five business days. For hospital births, it is usually the medical records staff that enters the birth information into the Electronic Birth Registration System (EBRS). Once a birth record is completed in the Electronic Birth Registration System, it is registered, and the birth certificate is available for issuance by any town clerk in the state.

Deaths: Although a physician is responsible for completing the death certificate, the job may be, and often is, delegated to the funeral director. Most of the information needed to complete the death certificate is obtained from the family of the deceased; however, the physician must complete and certify the cause of death information. Once a death record is completed in the Electronic Death Registration System (EDRS), it is registered, and the death certificate is available for issuance by any town clerk in the state.

Marriages: When a couple wishes to marry in Vermont, they provide a town clerk with a completed application to complete the license. The couple takes the license to an officiant to solemnize the marriage. The officiant signs and dates the license and returns it to the town clerk. The town clerk records and files the certificate of marriage and sends a certified copy to the Department of Health.

Divorces and dissolutions: A record of divorce or record of civil union dissolution is submitted to the court as part of the divorce or dissolution proceedings. The court keeps the report until the decree becomes final, usually three months after the court hearing. When the decree is final, the court clerk signs the report and sends it to the Department of Health for filing.

Fetal deaths and abortions: Reports of fetal death and induced termination of pregnancy (abortion) are sent directly to the Department of Health by the physician, hospital, or clinic that performs the procedure. By law, these reports are for statistical purposes only, are not public records, and are destroyed after five years.

The Department of Health also receives abstracts for Vermont resident births and deaths that occur in other states. This allows the Department to do statistical analyses of vital events involving Vermont residents, including events which occurred outside of the state. All vital records received are data entered and stored electronically, and data from births and deaths which occur in Vermont is transmitted to the National Center for Health Statistics to become part of a national database.

EXPLANATORY NOTES

1. The tables in this bulletin were derived from records of vital events filed at the Vermont Department of Health for calendar year 2022.
2. Rates are based on the 2022 population estimates produced by the United State Census Bureau.
3. Caution must be used in comparing rates due to the small population in Vermont and the small number of events recorded.
4. Comparisons are made to the total U.S. population. Prior to the 2011 report comparisons were made to the U.S. white population because less than five percent of the Vermont population was non-white.
5. If you have questions about the information found in this report, email vitalrecords@vermont.gov.
6. The following is a list of Vermont's counties and the county abbreviations that are used in this bulletin.

Addison	ADD	Lamoille	LAM
Bennington	BEN	Orange	ORG
Caledonia	CAL	Orleans	ORL
Chittenden	CHI	Rutland	RUT
Essex	ESX	Washington	WAS
Franklin	FRA	Windham	WHM
Grand Isle	GI	Windsor	WSR

DEFINITIONS, RATES, AND RATIOS

ABORTION: The purposeful interruption of an intrauterine pregnancy with the intention other than to produce a live-born infant or other than to remove a dead fetus, and which does not result in a live birth.

ABORTION RATE: Number of resident abortions occurring in Vermont x 1000, divided by the total resident women ages 15 to 44.

ABORTION RATIO: Number of resident abortions occurring in Vermont x 1000, divided by the total resident live births.

AGE ADJUSTMENT: Age adjusting allows one to compare rates among populations having different age distributions by adjusting the crude rates in each population to a standard population base. In this bulletin, county rates are adjusted using the state population distribution as the standard.

The computation formula is: The sum of (age-specific rate for each age group x standard population in that age group) multiplied by 1000, and then divided by the total standard population.

AGE-SPECIFIC DEATH RATE: Number of resident deaths in a specific age group x 1000, divided by the total resident population in a specific age group (using population estimates as of July 1).

AGE-SPECIFIC FERTILITY RATE: Number of resident live births to mothers in a specific age group x 1000, divided by the total resident female population in a specific age group (using population estimates as of July 1).

AGE-SPECIFIC PREGNANCY RATE: Number of resident pregnancies to women in a specific age group x 1000, divided by the total resident female population in a specific age group (using population estimates as of July 1).

ANNULMENT: The invalidation or voiding of a marriage, or civil union, which confers on the parties the status of never having been married to each other.

CIVIL UNION: A civil union is a legal relationship that provides for same-sex couples in Vermont all the benefits, protections, and responsibilities under law as are granted to spouses in a marriage. Civil unions became law on July 1, 2000, and were discontinued as of September 1, 2009, under the marriage equality act which legalized marriage between same sex partners.

CIVIL UNION RATE: Total number of civil unions x 1000, divided by the total resident population (using population estimates as of July 1).

CRUDE BIRTH RATE: Number of resident live births x 1000, divided by the total resident population (using population estimates as of July 1).

CRUDE DEATH RATE: Number of resident deaths x 1000, divided by the total resident population (using population estimates as of July 1).

CUMULATIVE ROW PERCENT: The total number of cases in the current column plus each previous column in each row, expressed as a percentage of all cases in that row.

DEATH: The permanent disappearance of any evidence of life at any time after live birth.

DIVORCE: The final legal dissolution of a marriage.

DIVORCE RATE: The sum of the number of divorces and annulments x 1000; divided by the total resident population, (using population estimates as of July 1).

DISSOLUTION: The final legal dissolution of a civil union.

FERTILITY RATE: Number of resident live births to women ages 15 to 44 x 1000, divided by the total resident female population ages 15 to 44 (using population estimates as of July 1).

FETAL DEATH: A reportable fetal death is a death prior to the complete expulsion or extraction from the mother of a product of conception, which has passed through at least the 20th week of gestation or weighs more than 400 grams; the death is indicated by the fact that, after such expulsion or extraction, the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.

FETAL DEATH RATE: Number of resident fetal deaths x 1000, divided by the total resident live births and resident fetal deaths.

FETAL DEATH RATIO: Number of resident fetal deaths divided by total resident live births.

INFANT DEATH: Death occurring in the first year of life.

INFANT DEATH RATE: Number of resident infant deaths x 1000, divided by the total resident live births.

LIVE BIRTH: The complete expulsion or extraction from the mother of a product of conception, irrespective of the duration of pregnancy, which, after such expulsion or extraction, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of the voluntary muscles whether the umbilical cord has been cut or the placenta is attached. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.

LOW BIRTH WEIGHT: A baby weighing less than 2,500 grams (5 pounds, 8 ounces) at birth.

LOW BIRTH WEIGHT PERCENT: The number of live births weighing less than 2,500 grams divided by the total number of live births.

MARRIAGE: Legally recognized union of two people. In Vermont statute, the word “marriage” means a civil marriage.

MARRIAGE RATE: Number of civil marriages x 1000, divided by the total resident population (using population estimates as of July 1).

NATURAL INCREASE: Occurs when the number of births is greater than the number of deaths.

NEONATAL DEATH: Death of a live-born infant before the infant becomes 28 days old (up to and including 27 days, 23 hours, 59 minutes from the moment of birth).

NEONATAL DEATH RATE: Number of resident neonatal deaths x 1000, divided by the total resident live births.

OCCURRENCE: The place where the event occurred.

PERINATAL DEATH: A fetal death or a death occurring before the infant becomes seven days old (up to and including six days, 23 hours, 59 minutes from the moment of birth).

PERINATAL DEATH RATE: Number of resident perinatal deaths x 1000, divided by the total resident live births and resident fetal deaths.

PLURALITY: The number of fetuses delivered live or dead at any time during a pregnancy.

PREGNANCY RATE: Number of resident pregnancies in women ages 15 to 44 x 1000, divided by the total resident female population ages 15 to 44.

RESIDENCE: The usual place of residence for the person to whom the event occurred. For births and fetal deaths, residence is defined as the mother's usual place of residence.

ROW PERCENT: The number of cases in each row expressed as a percentage of all cases in that row.

WEEKS OF GESTATION: The number of weeks elapsed between the first day of the last menstrual period and the date of delivery.

SUMMARY & POPULATION

Figure 2. Vermont Vital Events for 2022

Marriages, divorces, dissolutions and abortions displayed above are occurrence data. All other events are resident data.

Summary Statistics

Occurrence statistics include all events recorded in Vermont, including those involving visitors living outside Vermont. **Resident** statistics are limited to the events involving people with legal residence in Vermont, including events occurring outside Vermont. In 2022, reports of births and deaths to Vermonters were received from 31 states.

Summary of 2022 Vital Events

	<i>Occurrence Number</i>	<i>Resident Number</i>	<i>Resident Rate</i>
<i>Births</i>	5,101	5,312	8.2/1,000 POPULATION
<i>Deaths</i>	6,685	6,972	10.8/1,000 POPULATION
<i>Natural Increase</i>	N/A	-1,660	
<i>Infant Deaths</i>	24	25	4.7/1,000 LIVE BIRTHS
<i>Fetal Deaths</i>	18	17 ⁽¹⁾	3.2/1,000 LIVE BIRTHS AND FETAL DEATHS
<i>Abortions</i>	1,108	891 ⁽¹⁾	7.4/1,000 POPULATION (WOMEN AGES 15 – 44)
<i>Marriages</i>	5,070	N/A	7.8/1,000 POPULATION ⁽²⁾
<i>Divorces</i>	1,532	N/A	2.4/1,000 POPULATION ⁽²⁾
<i>Dissolutions</i>	7	N/A	⁽³⁾

2022 POPULATION: 647,064

⁽¹⁾ Does not include out-of-state occurrences.

⁽²⁾ Based on number of occurrences.

⁽³⁾ Rate less than 1 per 1,000.

1. Resident data unless otherwise noted.
2. Population is the census population for those years when the census was taken and is the mid-year estimate for non-census years.
NOTE: that mid-year population estimates are revised after each census is taken, so the 1991-1999 and 2001-2009 population figures and rates in this table differ from those presented in older publications.
3. Rate per 1,000 population.
4. Rate per 1,000 women ages 15-44.
5. Number of pregnancies includes Live Births and Fetal Deaths for 1857-1972, and Live Births, Fetal Deaths, and Abortions for 1973 – present.
6. Rate per 1,000 Live Births.
7. Events per 1,000 Live Births and Fetal Deaths.
8. Data for these years is based on occurrence returns only.
9. 1857 population is the 1860 census population.
10. 1857 was the first year that town clerks were required to report vital events to the Secretary of State and returns for that year are incomplete.
11. Value has been updated and differs from value presented in older publications.

1. The City of Essex Junction was established July 1, 2022.
The population estimate for the City of Essex Junction is included in the estimate for Essex Town.
Events attributed to the City of Essex Junction occurred between July 1 and December 31, 2022

BIRTHS

Figure 3. 2022 Most Popular Vermont Resident Birth Names

Females			Males

10	Maeve	15		Jack	
	Paisley			Owen	
	Phoebe		10	Everett	19

Rankings are based on unique spellings of names.

Births

In 2022, 5,312 babies were born to Vermont residents. This represents a decrease of 67 births from 2021. The crude birth rate in 2022 was 8.2 per 1,000 Vermont residents, a decrease from the 2021 rate of 8.3. The U.S. birth rate for 2022 was 11.0. The Vermont birth rate peaked in 1955 at 24 per 1,000 residents; it then dropped for two decades, remained relatively stable from the late 1970's through the 1980's, slowly and steadily decreased through the 1990's, and has continued a slow decline since.

FERTILITY

Although the crude birth rate is based on the total population, a better measure of birth patterns is the fertility rate which is based on the population of women ages 15 through 44, the peak child-bearing years. The 2022 Vermont fertility rate was 44.2 per 1,000 women ages 15 through 44 (Table B-6, Figure 4), a decrease from the 2021 rate of 44.7. The U.S. fertility rate was 56.0 in 2022. The fertility rate in Vermont peaked in 1960 at 126, declined through the 1960's and 1970's, leveled off slightly in the 1980's, steadily declined through the early 90's, and has remained fairly stable from 1995 through 2014. From 2015 through 2022 the rate appears to be on a declining trend again. Age-specific fertility rates have generally declined for women less than 35 years old and increased among those 35-44 years old.

FIGURE 4
AGE-SPECIFIC FERTILITY RATES, SELECTED YEARS 1980-2022

AGES/Year	1980	1990	2000	2010	2020	2022
TOTAL	63.3	60.6	49.7	52.5	44.6	44.2
15 – 19	38.5	34.1	23.4	17.8	6.9	5.8
20 – 24	102.4	93.9	74.1	64.0	34.3	31.3
25 – 29	113.0	114.6	102.1	97.2	74.6	70.0
30 – 34	60.2	79.5	84.0	101.0	91.7	93.8
35 – 44	12.5	19.6	21.3	24.7	33.1	34.4

37.4% of births in 2022 were to women in their twenties (Table B-5), down from 49.5 percent in 2010. Women aged 30 and over accounted for over half (60.3%) of births, up from 44.1 percent in 2010 and 43.9 percent in 2000. Women aged 15 through 19 accounted for 2.2 percent of births, down from 6.4 percent in 2010 and 8.0 percent in 2000.

BIRTH WEIGHT

The median birth weight for all resident births in 2022 was 3,374 grams (approximately 7 pounds 7 ounces). Low birth weight infants are those born weighing less than 2,500 grams (5 pounds 8 ounces). They are much more likely than heavier babies to suffer short and long-term disabilities, and to die in infancy. In 2022, 7.6 percent of Vermont resident births were low birth weight (Table B-12), and 1.3 percent were very low birth weight (under 1,500 grams or 3 pounds 5 ounces). The U.S. low birth weight rate for 2022 was 8.6 percent.

Low birth weight rates in Vermont varied by age group in 2022 (Table B-12), with the highest rate (15.5%) occurring in the 15-19 age group. The lowest rate was for women ages 35-39 and 40-44 at 6.0 percent.

Infant birth weight is also positively associated with maternal weight gain: mothers who do not gain adequate weight during pregnancy are more likely to deliver low birth weight infants. On the other hand, there are risks associated with gaining too much weight including delivery complications and maternal and infant obesity. Although the weight gained by 20.8% of Vermont mothers in 2022 fell below the range recommended by the Institute of Medicine, 49% gained above the recommended range (Table B-23). Please refer to Appendix B for further information on the guidelines.

The single most important preventable risk factor for low birth weight is smoking during pregnancy. The low-birth-weight rate among women who smoked cigarettes during their pregnancy was 17% compared to 6.7% among women who did not smoke during pregnancy (Table B-19). The rate of women who reported smoking during pregnancy in 2022 was 8.6%, a decrease from 9.5% reported in 2021. Among those who smoked before pregnancy or during the first trimester, 23.7% quit, a decrease from the 2021 quit rate of 27.8%.

PRENATAL CARE

Early, comprehensive, and high-quality prenatal care is essential for a healthy pregnancy and birth. Through prenatal care, pregnant women are screened for medical conditions and counseled on nutrition, behavioral risks (such as using tobacco and alcohol), and domestic violence.

In 2022, 87.3% of the babies were born to mothers who began prenatal care in the first three months of pregnancy (Table B-14), up from 84.7% in 2021.

The proportion of births in 2022 to Vermont mothers who delayed care to the third trimester or received no prenatal care was 3.0%, up from 2.4% in 2021.

Based on the Adequacy of Prenatal Care Utilization (APNCU) Index, in 2022, 87.1% of Vermont resident mothers received at least adequate prenatal care, (Table B-25). The percent of Vermont mothers who received inadequate care was 7.3%. Mothers aged 20 to 24 (10.7%) and aged 15 to 19 (10.5%) had the highest percent of inadequate care, while mothers aged 45 years or older had the highest percent of adequate plus intensive care (92.3%).

MEDICAL RISK FACTORS

Of those births with medical risk factors reported for the mother, the most common were gestational hypertension and gestational diabetes. The most reported characteristics of labor and delivery were spinal anesthesia during labor, induction of labor, augmentation of labor, fetal intolerance, and antibiotics received by mother during labor (Table B-21).

DELIVERIES

Of babies born in Vermont hospitals in 2022, 28.6% were delivered by cesarean section (Table B-18) compared to 32.1 percent for U.S. women in 2022. The primary cesarean section rate was 21.2% in Vermont for 2022, lower than the 22.5 percent for U.S. women in 2022. Of mothers delivering in Vermont hospitals in 2022 who had a previous delivery by cesarean section, 21.4% had vaginal births, compared to 14.6 percent for mothers in the U.S. in 2022.

VERMONT RESIDENT PREGNANCIES

The pregnancy rate is derived by adding live births, fetal deaths, and abortions. The pregnancy rates presented in this report underestimate the actual number of pregnancies for two reasons. First, Vermont resident abortions and fetal deaths that occur out of state are not reported to us. Second, by statute, fetal deaths prior to 20 weeks gestation are not reportable. Since residents of some counties may be more likely to use out-of-state services, the extent of these underestimates may differ among counties.

In 2022, the pregnancy rate in Vermont was 51.7 pregnancies per 1,000 women ages 15 to 44 (Table B-31), an increase from 51.6 in 2021. Overall, the pregnancy rate peaked at 127.6 in 1960 then dropped steadily through the next four decades to a low of 59.7 in 2001 before moving back above 60 in 2002. The pregnancy rate was fairly stable through 2014 but has been steadily declining since then (Table A-1).

The 2022 teen pregnancy rate was 9.6 pregnancies per 1,000 women ages 15 to 19 years (Table B-31), a decrease from 10.3 in 2021. In general, the teen pregnancy rate has been decreasing since 1991. In 2022, the highest pregnancy rate was seen in women 30 to 34 years of age at 104.4 followed by the 25 to 29 age group at 82.6. The lowest rate was for teens.

⁽¹⁾ RATES ARE PREGNANCIES PER 1,000 FEMALE POPULATION.

⁽²⁾ RATES ARE BASED ON 2022 POPULATION ESTIMATES.

⁽³⁾ INCLUDES ALL VERMONT RESIDENT LIVE BIRTHS AND FETAL DEATHS AND INDUCED ABORTIONS OCCURRING IN VERMONT TO VERMONT RESIDENTS.

DEATHS

FIGURE 8
VERMONT AND U.S. CRUDE DEATH RATES
1980-2022

Vermont data points can be found in Table A-1. Data points for the U.S. can be found in Appendix D.

Deaths

There were 6,972 Vermont resident deaths in 2022, 92 more than in 2021. The crude death rate was 10.8 per 1,000 population. The death rate has been generally increasing since 2010 when the rate was 8.6; prior to then it had been slowly declining from 11.2 in 1960, to 10.0 in 1970, down to 9.0 in 1980 and 8.2 in 1990, and then leveling off from 1990 to 2009 with rates varying between 8.1 and 8.5. The Vermont crude death rate was slightly lower than the U.S. crude death from 1988 through 2005 and has been slightly higher than the U.S. crude death rate since 2007, with the exception of 2020 (Figure 8).

From the 1960's through 2006 the two leading causes of death in Vermont were heart disease and cancer, respectively. In 2007 cancer took over as the leading cause of death among Vermonters and has remained such through 2019 except for 2016 when heart disease briefly overtook cancer as the leading cause of death in Vermont. From 2020 through 2022, heart disease overtook cancer as the leading cause of death in Vermont. Heart disease and cancer accounted for 44.1% of the deaths in 2022 (Table C-11). The heart disease crude death rate peaked in the 1960's at 439.5 deaths per 100,000 population but has decreased significantly since then. The heart disease death rate for 2022 was 245.7 per 100,000 population (Table C-1). In contrast, the crude death rate for cancer (malignant neoplasms) increased steadily since 1980 before leveling off in recent years. The 2022 death rate for cancer was 229.5.

Accidents (or unintentional injuries) has maintained its position as the third leading cause of death since 2016. The crude death rate declined to 31.3 in the mid 1990's, and from that point the death rate has continued to generally increase and is now more than twice the size of the rates from the early 2000's. The crude rate for 2022 was 90.3 deaths per 100,000 population, increasing from the 2021 rate of 82.7.

The crude death rate for Alzheimer's disease steadily increased throughout the 1990's, resulting in movement up from the tenth to the seventh leading cause of death in 1999. In 2004, Alzheimer's disease moved up to the sixth leading cause of death and remained there through 2010. In 2011 Alzheimer's moved up to the fifth leading cause of death in Vermont and has maintained that ranking through 2020 except in 2015 when it again ranked sixth. In 2021 Alzheimer's disease moved into the fourth spot and remains the fourth leading cause of death in 2022, with a crude death rate of 50.8 per 100,000 population, down from 52.2 in 2021, and more than twice the 2000 rate of 22.0 per 100,000 Vermont residents.

Chronic lower respiratory diseases (formerly referred to as chronic obstructive pulmonary diseases) had been the third leading cause of death among Vermont residents since 2005 before dropping to the fourth leading cause of death in 2016, and the fifth in 2021 and remaining in the fifth spot in 2022. The crude death rate for this cause increased from 33.0 per 100,000 population in the period from 1979 to 1981 to 50.9 in 2000. Between 2002 and 2022, the rate fluctuated from a low of 45.0 in 2002 to a high of 61.0 in 2005 to 45.0 per 100,000 population in 2022.

Cerebrovascular diseases, or stroke, dropped from the third leading cause of death in 2004 to the fifth leading cause beginning in 2005. In 2011 cerebrovascular diseases dropped to the sixth leading cause of death in Vermont and has maintained that rank except for 2015 when it temporarily moved back to ranking fifth. The crude death rate for cerebrovascular diseases has dropped significantly from its peak of 131.9 per 100,000 population in the early 1960's to 40.3 in 2022.

COVID-19 became the seventh leading cause of death in Vermont in 2021 and maintained that spot for 2022, up from the eighth leading cause in 2020. The rise of COVID-19 knocked multiple leading causes down in rankings, including suicide, Parkinson's disease, influenza and pneumonia, chronic liver disease and cirrhosis, and essential hypertension and hypertensive renal disease. In 2022, the death rate due to COVID-19 was 36.8 per 100,000 population, down from 40.6 in 2021.

Diabetes was the eighth leading cause of death in Vermont in 2022. Between 2003 and 2022 the crude death rate has fluctuated from a high of 29.6 per 100,000 population in 2003 to a low of 21.8 in 2019 and up to 27.7 in 2022.

Intentional self-harm (suicide) had been the eighth leading cause of death in recent years and moved into the ninth spot in 2020 and has remained there through 2022. The death rate due to intentional self-harm in 2022 was 19.8 per 100,000 population, down from 22.0 in 2021.

The tenth leading cause of death in Vermont in 2022 was Parkinson's disease with a crude death rate of 16.2 per 100,000 population, overtaking essential hypertension and hypertensive renal disease which was the tenth leading cause of death in Vermont in 2021.

The leading causes of death varied with age (Table C-2 and Table C-14). Accidents (unintentional injuries) were the leading cause of death for people ages 15 to 54. Cancer was the leading cause of death, followed by heart disease for 55 to 84 year olds, and at ages 85 and higher, the causes were reversed with heart disease as the leading cause, followed by cancer.

Death rates dramatically increase after age 75. While people ages 75 and over comprised only 8.6 percent of the total population in 2022, they accounted for 57.1 percent of total deaths in 2022. Aside from accidents, COVID-19, and influenza and pneumonia, the leading causes of death in this age group were all chronic diseases.

The leading causes of death did vary by sex (Table C-1 and Table C-11). Heart disease was the leading cause of death, cancer was the second leading cause, and accidents (unintentional injuries) was the third leading cause for both men and women. Alzheimer's disease was the fourth leading cause of death among women and was seventh among men. COVID-19 was the fourth leading cause of death for men and was seventh for women.

Deaths occurring in a hospital accounted for 31.2 percent of 2022 Vermont resident deaths (Table C-17), less than 35.8 percent in 2010, and down from 42 percent in 2000. In 2022, 38.5% of Vermont resident deaths occurred at home and 19.7% occurred in a nursing home or long-term care facility.

FIGURE 9
FIVE LEADING CAUSES OF DEATH IN VERMONT IN 2022,
VERMONT AND U.S. RATES

Vermont and U.S. rates in this chart are age-adjusted to the 2000 U.S. standard population for comparison purposes.

VERMONT AND U.S. ABORTION RATIOS
1980 - 2022

Vermont data points can be found in Table A-1.
Data points for the U.S. population can be found in Appendix D and are based on reporting states.
US Data for 2022 is not available at the time of printing.

Infant Deaths, Fetal Deaths, and Abortions

INFANT DEATHS

In 2022, there were 25 resident infant deaths, which equates to a rate of 4.7 infant deaths per 1,000 live births. This rate is lower than the 2022 U.S. rate of 5.6. The Vermont infant mortality rate steadily declined from 24.0 in 1960 to 5.8 per 1,000 live births in 1991. Over the past three decades the rate has fluctuated between a high of 7.4 in 1994 and a low of 2.8 in 2019 (Table A-1).

Eleven (44 percent) of the infant deaths occurred during the neonatal period, that is before the infant became 28 days old (Table D-3). The neonatal death rate was 2.1 deaths per 1,000 live births (Table D-2), below the 2022 U.S. neonatal death rate of 3.6. The Vermont neonatal death rate decreased from 18.6 in 1960, to 14.4 in 1970, to 6.2 in 1980, to 3.6 in 1990 (Table A-1), then followed an increasing trend through the nineties to a high of 5.9 in 1998. The rate has fluctuated throughout the past two decades.

One of the most important risk factors in infant mortality is low birth weight (Table D-3). Of resident infants who died in 2022, 32% had a birth weight less than 2500 grams (5 pounds 8 ounces), while 7.6 percent of all resident births were low birth weight. The infant mortality rate for low weight births was 19.8 deaths per 1,000 live births.

FETAL DEATHS

Unlike births and deaths, reports of fetal deaths and abortions are not shared among states. Therefore, statistics concerning these events reflect occurrences in Vermont only and do not include Vermont resident fetal deaths and abortions that occurred in other states.

There were 17 resident fetal deaths in 2022 (Table D-1) for a rate of 3.2 per 1,000 live births and fetal deaths, a decrease from 4.4 per 1,000 live births and fetal deaths in 2021 (Table D-2). Of the fetal deaths in Vermont, 11 weighed less than 2500 grams (Table D-3). From 2020 to 2022, the fetal death rate was highest in the 40 to 44 age group: 6.4 per 1,000 live births and fetal deaths (Table D-2).

VERMONT ABORTIONS

There were 1,108 abortions performed in Vermont in 2022, an increase from 1,033 in 2021. Vermont residents accounted for 891, or 80.4 percent. This represents a rate of 7.4 per 1,000 Vermont women ages 15 to 44.

The abortion ratio is the number of resident abortions occurring in Vermont times 1,000, divided by the total resident live births. The abortion ratio for 2022 was 167.7 abortions per 1,000 live births, an increase from the 152.1 ratio seen in 2021. The U.S. abortion ratio was 204 per 1,000 live births in 2021. Women ages 25 to 29 had the highest age-specific abortion rate, of 14.9 per 1,000 women, followed by women ages 20 to 24 at 14.3.

First trimester abortions (less than or equal to 12 weeks) accounted for 90.3 percent of all Vermont abortions, and 74.2 percent of all Vermont abortions were for pregnancies of less than 9 weeks duration (Table E-5). See Appendix B for the method used to compute the number of weeks of gestation.

MARRIAGES AND DIVORCES

Figure 12
VERMONT AND U.S. MARRIAGE AND DIVORCE RATES
1980 - 2022

Data points for the U.S. population can be found in Appendix D. Vermont data points can be found in Table A-1.

MARRIAGES & DIVORCES

MARRIAGES

NOTE: Marriage between same sex partners became legal in Vermont on September 1, 2009. The tables in this section include marriages between same sex partners and therefore the labels have been changed to reflect the labels used on the revised civil marriage license and certificate: Applicant A and Applicant B.

In 2022, 5,070 marriages were performed in Vermont, 305 more than in 2021. The 2022 Vermont marriage rate was 7.8 per 1,000 Vermont resident population, lower than the 2022 U.S. rate of 6.2. Marriages between two out-of-state residents accounted for 37.7 percent of the marriages in Vermont (Table F-2).

There was the usual seasonal variation with more marriages occurring in the summer than in any other season. October (881), September (871), and August (721) were the most popular months for marriages in 2022 (Table F-5).

More than two-thirds (67.1 percent) of the marriages were firsts for both applicants (Table F-4). For Applicant B, 75.0 percent were first marriages, and for Applicant A, 75.5 percent were first marriages. Remarriages for both applicants accounted for 15.7 percent of marriages in Vermont.

Civil ceremonies accounted for 64.7 percent of marriages in 2022 (Table F-6).

DIVORCES

There were 1,532 divorces granted in 2022, 70 more than in 2021. This represents a rate of 2.4 per 1,000 residents, the same as the 2022 U.S. rate of 2.4.

The median length of marriages ending in divorce was 10 years, with a range of 4 months to 53 years. The median age at the time of divorce was 43 for Applicant A with a range of 20 to 78 years. The median age at the time of divorce was 44 for Applicant B, with a range of 20 to 89 years (Table G-2).

Appendix B

OBSTETRIC DATES AND INTERVALS AND WEIGHT GAIN RECOMMENDATIONS

MONTH PRENATAL CARE BEGAN

Since 1988, the Vermont Department of Health has used the National Center for Health Statistics (NCHS) method of calculating the month prenatal care began. This allows Vermont data to be more easily compared to national data and eliminates any errors that could be introduced by hospitals using different reporting methods.

The calculation for month prenatal care began changed at the national level with the 2003 Revision of the U.S. Standard Certificate of Live Birth. Vermont implemented its' new birth certificate on July 1, 2005, based on the 2003 Revision of the U.S. Standard, so the Department of Health began using the new calculation in 2005. The new calculation converts to century dates the date of last menses and the date of the first prenatal visit, determines the difference in number of days between these dates, and then converts the days to months of pregnancy. For example, if the date of last menses was March 15, 2005 and the date of the first prenatal visit was June 30, 2005, then the difference is 107 days which means that prenatal care began in the fourth month.

Please note that this change in calculation affected the rate of entry into first trimester prenatal care. Analysis done by the Vermont Department of Health shows that this change in calculation reduced the rate of entry into first trimester prenatal care by about 7%, so current rates should not be compared to rates prior to 2005.

GESTATIONAL AGE

Live Births and Fetal Deaths: The methodology used to determine gestational age matches that used by the National Center for Health Statistics.

Two measures of gestational age are available from the standard certificates. The standard certificates collect information on the first day of the mother's last menstrual period (LMP). The interval between the LMP and the date of birth is the *calculated* gestational age. The standard certificate also collects a *clinical estimate* of gestation.

The primary measure used by NCHS to determine the gestational age of the newborn was previously the *calculated* weeks of gestation, supplemented by an algorithm that determined if the calculated gestational age and birth weight were compatible, and the clinical estimate of gestational age may replace the calculated age in some cases. However, this method is subject to error due to imperfect maternal recall and to misidentification of the LMP. Therefore, beginning in 2014 the clinical estimate of gestational age is used as the gestational age in all cases.

Abortions: The clinical estimate of gestation is used by the Department, including the tabulations in this report.

WEIGHT GAIN DURING PREGNANCY

The weight gain guidelines reflected in this report were taken from "Weight Gain During Pregnancy: Reexamining the Guidelines" Institute of Medicine, National Academies Press, 2009. The recommendations are as follows for singleton, full term births:

PRE-PREGNANCY BMI

RECOMMENDED WEIGHT GAIN

< 18.5
18.5 - 24.9
25.0 - 29.9
> 30.0

28 - 40 LBS
25 - 35 LBS
15 - 25 LBS
11 - 20 LBS

Malignant neoplasms	C00-C97	140-208
of lip, oral cavity and pharynx	C00-C14	140-149
of esophagus	C15	150
of stomach	C16	151
of colon, rectum and anus	C18-C21	153-154
of liver and intrahepatic bile ducts	C22	155
of pancreas	C25	157
of larynx	C32	161
of trachea, bronchus and lung	C33-C34	162
of skin	C43	172
of breast	C50	174-175
of cervix uteri	C53	180
of corpus uteri and uterus, part unspecified	C54-C55	179, 182
of ovary	C56	183.0
of prostate	C61	185
of kidney and renal pelvis	C64-C65	189.0, 189.1
of bladder	C67	188
of meninges, brain and other parts of central nervous system	C70-C72	191-192
of lymphoid, hematopoietic and related tissue	C81-C96	200-208
Hodgkin's disease	C81	201

<i>Causes of Death</i>	<i>Category Codes According to the International Classification of Diseases</i>	
	<i>Tenth Revision</i>	<i>Ninth Revision</i>
Non-Hodgkin's lymphoma	C82-C85	200, 202
Leukemia	C91-C95	204-208
Multiple myeloma and immunoproliferative neoplasms	C88, C90	203
Other and unspecified malignant neoplasms of lymphoid, hematopoietic and related tissue	C96	---
All other and unspecified malignant neoplasms	C17, C23-C24, C26-C31, C37-C41, C44-C49, C51- C52, C57-C60, C62-C63, C66, C68-C69, C73-C80, C97	152, 156, 158-160, 163-171, 173, 181, 183.2-184, 186-187, 189.2-190, 193-199
In situ neoplasms, benign neoplasms and neoplasms of uncertain or unknown behavior	D00-D48	210-239
Anemias	D50-D64	280-285
Diabetes mellitus	E10-E14	250
Nutritional deficiencies	E40-E64	260-269
Malnutrition	E40-E46	260-263
Other nutritional deficiencies	E50-E64	264-269
Meningitis	G00, G03	320-322
Parkinson's disease	G20-G21	332
Alzheimer's disease	G30	331.0
Major cardiovascular diseases	I00-I78	390-434, 436-448
Diseases of heart	I00-I09, I11, I13, I20-I51	390-398, 402, 404, 410-429
Acute rheumatic fever and chronic rheumatic heart diseases	I00-I09	390-398
Hypertensive heart disease	I11	402
Hypertensive heart and renal disease	I13	404
Ischemic heart diseases	I20-I25	410-414, 429.2
Acute myocardial infarction	I21-I22	410
Other acute ischemic heart diseases	I24	411
Other forms of chronic ischemic heart disease	I20, I25	412-414, 429.2
Atherosclerotic cardiovascular disease, so described	I25.0	429.2
All other forms of chronic ischemic heart disease	I20, I25.1-I25.9	412-414
Other heart diseases	I26-I51	415-429.1, 429.3-429.9
Acute and subacute endocarditis	I33	421
Diseases of pericardium and acute myocarditis	I30-I31, I40	420, 422-423
Heart failure	I50	428
All other forms of heart disease	I26-I28, I34-I38, I42-I49, I51	415-417, 424-427, 429.0-429.1, 429.3-429.9
Essential (primary) hypertension and hypertensive renal disease	I10, I12	401, 403
Cerebrovascular diseases	I60-I69	430-434, 436-438
Atherosclerosis	I70	440
Other diseases of circulatory system	I71-I78	441-448
Aortic aneurysm and dissection	I71	441
Other diseases of arteries, arterioles and capillaries	I72-I78	442-448
Other disorders of circulatory system	I80-I99	451-459
Influenza and pneumonia	J10-J18	480-487

<i>Causes of Death</i>	<i>Category Codes According to the International Classification of Diseases</i>	
	<i>Tenth Revision</i>	<i>Ninth Revision</i>
Influenza	J10-J11	487
Pneumonia	J12-J18	480-486
Other acute lower respiratory infections	J20-J22	466
Acute bronchitis and bronchiolitis	J20-J21	466
Unspecified acute lower respiratory infection	J22	- - -
Chronic lower respiratory diseases	J40-J47	490-494, 496
Bronchitis, chronic and unspecified	J40-J42	490-491
Emphysema	J43	492
Asthma	J45-J46	493
Other chronic lower respiratory diseases	J44, J47	494, 496
Pneumoconioses and chemical effects	J60-J66, J68, U070	500-506
Pneumonitis due to solids and liquids	J69	507
Other diseases of respiratory system	J00-J06, J30-J39, J67, J70-J98	034.0, 460-465, 470-478, 495, 508-519
Peptic ulcer	K25-K28	531-534
Diseases of appendix	K35-K38	540-543
Hernia	K40-K46	550-553
Chronic liver disease and cirrhosis	K70, K73-K74	571
Alcoholic liver disease	K70	571.0-571.3
Other chronic liver disease and cirrhosis	K73-K74	571.4-571.9
Cholelithiasis and other disorders of gallbladder	K80-K82	574-575
Nephritis, nephrotic syndrome and nephrosis	N00-N07, N17-N19, N25-N27	580-589
Acute and rapidly progressive nephritic and nephrotic syndrome	N00-N01, N04	580-581
Chronic glomerulonephritis, nephritis and nephropathy not specified as acute or chronic, and renal sclerosis unspecified	N02-N03, N05-N07, N26	582-583, 587
Renal failure	N17-N19	584-586
Other disorders of kidney	N25, N27	588-589
Infections of kidney	N10-N12, N13.6, N15.1	590
Hyperplasia of prostate	N40	600
Inflammatory diseases of female pelvic organs	N70-N76	614-616
Pregnancy, childbirth and the puerperium	O00-O99	630-676
Pregnancy with abortive outcome	O00-O07	630-639
Other complications of pregnancy, childbirth and the puerperium	O10-O99	640-676
Certain conditions originating in the perinatal period	P00-P96	760-771.2, 771.4-779
Congenital malformations, deformations and chromosomal abnormalities	Q00-Q99	740-759
Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified	R00-R99	780-799
All other diseases (Residual)	Residual	Residual
Accidents (unintentional injuries)	V01-X59, Y85-Y86	E800-E869, E880-E929
Transport accidents	V01-V99, Y85	E800-E848, E929.0-E929.1

2021	11.0	56.3	8.5	10.4	5.4	3.5	5.7	204	6.0	2.5
2022	11.0	56.0	8.6	9.8	5.6	3.6	5.5	n/a	6.2	2.4

1. Crude birth rates are per 1000 population. Fertility rates are per 1000 women aged 15-44.
2. Crude death rates are per 1000 population.
3. Rates are per 1000 live births. Fetal death rate is per 1000 live births plus fetal deaths.
4. Ratio is per 1000 live births.
5. Rates are events per 1000 population.
